

Clinical Trial Protocol

Iranian Registry of Clinical Trials

25 Jun 2026

A clinical trial on the effect of mirror therapy in comparison with routine physiotherapy on motor abilities of patients with stroke patients

Protocol summary

Summary

Hemiparesis and hemiplegia are the most common and the worse complications of stroke. This study aimed to observe the effect of mirror therapy on motor abilities of patients with stroke in Mashhad, Iran. In this Randomized Control Trial, 40 patients with stroke (more than 1 month after the last stroke) will be assigned randomly in two groups of mirror therapy (n=20) and control (n=20). The inclusion/ exclusion criteria will be age of 30-65 years old, score of 1-3 from motor recovery index, lack of cognitive, verbal and visual disorder, recurrence of stroke or any problem responsible for stopping rehabilitation program. Intervention will be include 20 sessions of 30-minute mirror therapy, i.e. will perform flexion and extension of upper and lower extremities of affected and healthy ones in front of mirror and observe just the mirror image. In addition to mirror therapy in both groups, the routine program (physiotherapy and neuromuscular stimulation) will be performed. Upper and lower extremity motor abilities will be assessed before, during and after treatment using motor recovery scale, function Index Measure, Function Ambulation Classification, Barthel Index Scale and the range of motion will be measured by goniometry then two groups will compared.

Scientific title

A clinical trial on the effect of mirror therapy in comparison with routine physiotherapy on motor abilities of patients with stroke patients

Public title

The effect of mirror therapy on rehabilitation of stroke patients

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria: 1. At least 1 month after stroke. 2. Conducting routine rehabilitation program. 3. Score of

1-3 from motor recovery index. 4. No severe cognitive, verbal and visual disorder, history of dementia, Global aphasia or any visual disorder based on neurologist examination. 5. First experience of stroke. 6. No disease resulting in motor defects. Exclusion criteria: 1. Repetitive stroke. 2. No tendency for continuing rehabilitation program. 3. Any disease such as hemi anesthesia, trauma, severe infection, etc which cause to stop rehabilitation program. 4. Absent in 4 intermittent sessions or 2 subsequent sessions of course.

Age

From **30 years** old to **65 years** old

Gender

Both

Phase

2

Groups that have been masked

No information

Sample size

Target sample size: **40**

Randomization (investigator's opinion)

Randomized

Randomization description

Blinding (investigator's opinion)

Not blinded

Blinding description

Placebo

Not used

Assignment

Parallel

Other design features

Coin dropping will be use for random assignment in two groups of intervention and control. i.e. the clients with first session of physiotherapy in odd days will be assigned to test group and the others whose first session in even days will be assigned to control group.

Health conditions studied

1

Description of health condition studied

stroke

ICD-10 code

167.9

ICD-10 code description

Cerebrovascular disease, unspecified

Primary outcomes

1

Description

motor ability of upper extremity

Timepoint

before, 5th, 10th, 15th and last sessions of intervention

Method of measurement

Goniometry, Barthel Index Scale, Motor Recovery Index.

2

Description

motor ability of lower extremity

Timepoint

before, 5th, 10th, 15th and last sessions of intervention

Method of measurement

Goniometry, Function Ambulation Classification, Barthel Index Scale, Function Index Measure, Motor Recovery Index.

Secondary outcomes

empty

Intervention groups

1

Description

Intervention will be 20 sessions of 30-minute mirror therapy, i.e. flexion and extension of upper and lower extremities of affected and healthy ones in front of mirror and observe just the mirror image. Upper and lower extremity motor abilities will be assessed before, at 5th, 10th, 15th and last sessions of intervention using motor recovery scale, function Index Measure, Function Ambulation Classification, Barthel Index Scale and the range of motion will be measured by goniometry.

Category

Rehabilitation

2

Description

Control group will perform all physiotherapy exercises of upper and lower extremities without mirror.
