Evaluating effectiveness of life review treatment on depression, self efficacy & quality of life of elderly

Protocol summary

Study aim
Determine the Effectiveness of life review treatment on depression, quality of life and self efficacy in the elderly living at home.

Design
A group of 4 elderly people have been selected as targeted and available samples. It is a single case study that each subject is also used as his/her control.

Settings and conduct
This study is conducted on elderly people living in the home who are referred to day care centers of the elderly on a daily basis. Four elderly people are Target-based selected and the method of treatment is review of life. Before the intervention, depression, quality of life and self-efficacy are obtained as base line and then during 3, 6, 8th and follow-up sessions. These questionnaires are completed by individuals.

Participants/Inclusion and exclusion criteria
Inclusion criteria: All Elderly people over the age of 60 and staying at home. Exclusion criteria: severe or moderate depression.

Intervention groups
Four participants for whom life review method is performed.

Main outcome variables
Depression; self- efficacy and quality of life in the elderly
