Effect of eyes irrigation by brewed black tea on the onset of redness, inflammation and purulent secretion in patients hospitalized in intensive care units

Protocol summary

Summary

Methodology: The study is a clinical trial, double-team with randomized allocation groups, done in two medical centers. Forty patients hospitalized in intensive care units after adaptation with inclusion and exclusion criteria including the absence of any trauma or injury to the eye and absence of signs of the study will randomly allocate into two groups to participate in the study if they consent to do so. In the intervention group, in addition to usual ICU eye care routine, one cc of brewed black tea for each eye will be applied once a day for 7 days. In the control group with the same conditions, the physiologic serum of 1 cc will be used to wash the patients' eyes instead of tea. In both groups on days 1, 3 and 7 the patients' eyes will be monitored, with examination criteria such as redness, eye discharge and inflammation of the eye. Symptoms will be recorded then the target samples will be removed from the rest of the investigation. In performing this teamwork-based research, the intervention is done by the main researcher, the co-researcher is responsible for the patients' monitoring and the data will be analyzed by statistics adviser as blind people in a double-blind framework.

Scientific title

Effect of eyes irrigation by brewed black tea on the onset of redness, inflammation and purulent secretion in patients hospitalized in intensive care units

Public title

Effect of eyes irrigation by brewed black tea on eye inflammation

Purpose

Prevention

Inclusion/Exclusion criteria

Inclusion criteria: Lack of eye injury and trauma; lack of congenital eye disease; no symptoms of redness; swelling and discharge at the time of sampling. Exclusion criteria: need to tarsarify; possible allergic to tea extract; need for using Immunosuppressive drugs; consent from the patient or the patient's parents participate in the study; transfer the patient or died during intervention.

Age
