Effect of music therapy on pain and anxiety in patients undergoing root canal treatment

Protocol summary

Summary

For most of patients dental environment is always an stressful place, because of some reasons such as fear of anesthesia and a history of past painful treatments .the purpose of this study is to explore the Effect of music therapy on pain and anxiety in patients undergoing root canal treatment in dental clinic. method and materials: 60 patients who came to a dental clinic for endodontic treatment were selected for this study. The subjects were randomly assigned to the music intervention and the control group.not having hearing defects and any other systemic problems and not using any sedative or analgesic drugs are the most important inclusion criteria.Subjects in the music group listened to selected music using headphones throughout the root canal treatment procedure but the control group subjects didn't . the subjects' heart rate, blood pressure were measured before the study, after anesthesia, during and end of the root canal treatment procedure .Patients completed the anxiety questionnaire both before and after the procedure and reported pain severity.
