Evaluation of probiotics effect on non-organic chronic Abdominal pain in children

Protocol summary

Summary

Nonfunctional chronic abdominal pain is common disorder in child. This is a benign disease, But this is a cause of Anxiety. different mechanism is expressed. Change in bacterial environment in GI tract can lead nonfunctional abdominal pain in child. Probiotics can reduce bacterial overgrowth and reduce Mucosal Inflammation. Several studies showed effect of probiotics in nonfunctional abdominal pain in children. Aim of our study is probiotic effects on nonfunctional abdominal pain in children. Studied 52 children in a randomized, double blind and controlled study that will be selected from the outpatients of Doctor Sheikh Children's Hospital Medical Center. All children are evaluated by a pediatric gastroenterologists and diagnosed chronic abdominal pain in children. Reject organic diseases causing abdominal pain for them. All children from 4 to 18 years with gastrointestinal functional disorder consistent with ROME III criteria are entered the test. Children under the age of 4 or over 18, whom are received the drug for the treatment of chronic pain (such as drug treatment, such as herbal medicines or probiotics), or receiving drugs that are known as cause abdominal pain, are excluded from the study. By randomization is determined that which patients receive probiotics or placebo. Probiotic and placebo include at least Concentration 10^8 bacill or placebo will be provided. Placebo and probiotic in shape, size, color and taste will be similar. The probiotic and placebo will be administered 2 times a day for a period of 4 weeks.

Health conditions studied

1

Description of health condition studied

Non-organic chronic abdominal pain in children

ICD-10 code

ICD-10 code description

Primary outcomes

1

Description

Abdominal pain improvement

Timepoint

Every week to 4 weeks

Method of measurement

By patients and parents - Questionnaire forms

Secondary outcomes

1

Description

Daily activity improvement

Timepoint

Every week to 4 weeks

Method of measurement

By patients and parents - Questionnaire forms

2

Description

Change of defecation

Timepoint

Every week to 4 weeks

Method of measurement

By patients and parents - Questionnaire forms

3

Description

Change in appetite

Timepoint

Every week to 4 weeks

Method of measurement

By patients and parents - Questionnaire forms

Intervention groups

1

Description

probiotic pills - for 4weeks- 1 tablet daily - Concentration 10^7 to 10^9 bacill

Category

Treatment - Drugs
