Comparison of Mucoderm with connective tissue graft on root coverage in Miller class I and II gingival recessions

Protocol summary

Study aim
Comparison of Mucoderm with connective tissue on root coverage
Design
Pragmatic, community based, parallel group, double blind, randomized controlled trial
Settings and conduct
In patients with bilateral Miller class I and II gingival recessions , one side will be treated by mucoderm and the other side will be treated with connective tissue randomly. Patients and researcher won't know which side is treated by which material
Participants/Inclusion and exclusion criteria
Patients with bilateral Miller class I and II gingival recessions 2mm or more and those who do not smoke, Women who are not pregnant or breastfeeding, those who do not have systemic diseases which are contraindicated for surgery,patients who do not consume drugs affecting gingivae, patient with appropriate tooth brushing method like Stillman and patients with good oral hygiene. Teeth which are abutments for partial dentures, orthodontic brackets, teeth that are crowns and decayed and have cervical fillings will be excluded
Intervention groups
For root coverage, Mucoderm will be used in one side and connective tissue will be used on the other side and root coverage percentage will be compared between the two groups
Main outcome variables
Evaluation of gingival recession, keratinized tissue width, gingival thickness, pocket depth and clinical attachment level before and after surgery

Scientific title
Comparison of Mucoderm with connective tissue graft on root coverage in Miller class I and II gingival recessions

Public title
Comparison of Mucoderm with connective tissue graft on root coverage

Purpose
Treatment
Inclusion/Exclusion criteria
Inclusion criteria:
Patients with Miller class I and II gingival recessions with 2 mm or more
Exclusion criteria:
Patients who smoke Women who are pregnant or breastfeeding Patients with systemic diseases which have surgical contraindications Patients who consume drugs with adverse effects on gingivae Patients with inappropriate oral hygiene Teeth which are abutments for partial denture, orthodontic brackets, crowns, decays and cervical fillings
Age
No age limit
Gender
Both

Phase
N/A
Groups that have been masked

- Participant
- Investigator
- Data analyser

Sample size
Target sample size: **10**
Randomization (investigator's opinion)
Randomized
Randomization description
Computer generated randomization list (Microsoft Excel 2010)
Blinding (investigator's opinion)
Double blinded
Blinding description
Participants, investigator and Data analyzer won't know which side is treated with Mocoderm and which side is treated with connective tissue.
Placebo
Not used
Assignment
Parallel
Other design features

Approval date
2018-02-28, 1396/12/09
Ethics committee reference number
IR.IAU.DENTAL.REC.1397.023

Health conditions studied

1

Description of health condition studied
Root coverage treatment
ICD-10 code
K05.5
ICD-10 code description
Root coverage treatment

Primary outcomes

1

Description
Root coverage percentage
Timepoint
Before surgery and 1, 3 and 6 month after surgery
Method of measurement
Gingival Recession depth measurement with Williams probe

Secondary outcomes

1

Description
Measurement of keratinized tissue, pocket depth and attachment level.
Timepoint
Before, 1, 3 and 6 months after therapy.
Method of measurement
By periodontal probe

Intervention groups

1

Description
Control group: grafting with connective tissue graft
Category
Treatment - Surgery

2

Description
Intervention group: grafting with Mucoderm
Category
Treatment - Surgery
