Clinical Trial Protocol
Iranian Registry of Clinical Trials

19 Sep 2026

Evaluation of different particle size of Iranian allograft(cenobone) in socket preservation procedure

Protocol summary

Study aim
evaluation of different particle size bone material in preserving if dental socket
Design
clinical trial,randomized,blind, without control group,25 patient input
Settings and conduct
dentistry factuly of Ahwaz joundishapour university of medical science. using similar package of bone material
Participants/Inclusion and exclusion criteria
hopless teeth,healthy systemically.endodontic reason or caries that can't restore.patient who want to placing dental implant
Intervention groups
tooth extractin and filing the socket with bone material small particle size in first group and large particle size in second group.then bone material coverd by collagen membrane and flap sutured
Main outcome variables
increasing or preserving height and width of alveolar bone

General information

Reason for update
Acronym
IRCT registration information
IRCT registration number: **IRCT20191015045118N1**
Registration date: **2019-12-04, 1398/09/13**
Registration timing: **retrospective**

Last update: **2019-12-04, 1398/09/13**
Update count: **0**
Registration date
2019-12-04, 1398/09/13

Actual recruitment end date
2019-01-30, 1397/11/10
Trial completion date
2019-04-30, 1398/02/10

Scientific title
Evaluation of different particle size of Iranian allograft(cenobone) in socket preservation procedure

Public title
Socket preservation
Purpose
Treatment
Inclusion/Exclusion criteria
Inclusion criteria:
Patient that have Hopless tooth Systemically healthy
Exclusion criteria:
Systemic disease Smoker Pregnancy Periodontitis Childs Genetic disease
Age
From **18 years** old to **60 years** old
Gender
Both

Phase
N/A
Groups that have been masked

- Participant

Sample size
Target sample size: **25**
Actual sample size reached: **25**
Randomization (investigator's opinion)
Randomized
Randomization description
First, a list was made and patients were added to the list at the time of referral. Patients were randomly divided into two groups by random number table. In the first group, small particle size was used for socket preservation and in the second group, large particle size was used
Blinding (investigator's opinion)
Single blinded
Blinding description
Using unknown particle size that patient don't knows how many particle size used(using similar package)
Placebo
Not used
Assignment
Parallel
Other design features

Secondary Ids

empty

Ethics committees

1

Ethics committee
Name of ethics committee
Ethics committee of Ahwaz University of Medical Sciences
Street address
Golestan
City
Ahwaz
Province
Khouzestan
Postal code
9414974877
Approval date
2018-08-29, 1397/06/07
Ethics committee reference number
Ir.ajums.rec.1397.338

Health conditions studied

1

Description of health condition studied
Socket preservation
ICD-10 code
ICD-10 code description

Primary outcomes

1

Description
Height and width of alveolar ridge
Timepoint
first day and after 4 month
Method of measurement
using CBCT(cone beam cumputered tomography) measurement tools to evaluate ridge dimention

Secondary outcomes

1

Description
no need to any secendry bone augmentation
Timepoint
first day and 4 month
Method of measurement
CBCT measerment tools

Intervention groups

1

Description
first group, small particles sized bone graft material was used and The same collagen membrane was applied to the bone powder. The gingiva was finally sutured and the sutures were removed after two weeks.
Category
Treatment - Surgery

2

Description
Intervention group: second group, the large particle size was used. The same collagen membrane was applied to the bone powder for both groups. The gingiva was finally sutured and the sutures were removed after two weeks.
Category
Treatment - Surgery
