Effect of combination of Propofol-Remifentanil versus Ketofel in duration of seizure and hemodynamic signs of psychotics patient in electroconvulsive therapy

Protocol summary

Study aim
Effect of combination of Propofol-Remifentanil vs Ketofel in duration of seizure and hemodynamic signs of psychotics patient in electroconvulsive therapy

Design
This study is clinical trial and double-blind. 105 psychotics patients for electroconvulsive therapy will be randomly divided into 3 groups. Groups of study are parallel.

Settings and conduct
105 psychotics patients for electroconvulsive therapy referring to Amir Kabir Hospital of Arak are included in this study. The study is double-blind. This study is clinical trial.Researcher who complete questionnaire and analyzer are blind (double blind).Outcome elevator and analyzer don't aware from grouping.

Participants/Inclusion and exclusion criteria
Inclusion criteria:18 to 50 years; patients with a diagnosis of major schizophrenia depression of catatonia or bipolar disorder; ASA class I and II Exclusion criteria: Sensitivity to medications used; drug history; history of cardiovascular disease; pregnancy; patients in need of treatment for hemodynamic instability following seizures, who had less than 25 second tonic or clonic seizures, or had more than 60% energy to induce seizures

Intervention groups
Control group: We will inject distilled water and propofol 1 milligram in kilogram. Intervention group:We will inject Remifentanil 1 milligram in kilogram (Produced by Normon Company) and Propofol 1 milligram in kilogram. Intervention group:We will inject Ketamin 1 milligram in kilogram (Ferdows & Razi company) and Propofol 1 milligram in kilogram.

Main outcome variables
Mean arterial pressure, heart rate, arterial oxygen saturation, duration of seizures

Scientific title
Effect of combination of Propofol-Remifentanil versus Ketofel in duration of seizure and hemodynamic signs of psychotics patient in electroconvulsive therapy

Public title
Effect of combination of Propofol-Remifentanil vs Ketofel in duration of seizure and hemodynamic signs of psychotics patient in electroconvulsive therapy
Purpose
Treatment
Inclusion/Exclusion criteria
Inclusion criteria:
18 to 50 years Patients with a diagnosis of major schizophrenia depression of catatonia or bipolar disorder ASA class I and II
Exclusion criteria:
Sensitivity to medications used Drug history History of cardiovascular disease Pregnancy Patients in need of treatment for hemodynamic instability following seizures, who had less than 25 second tonic or clonic seizures, or had more than 60% energy to induce seizures
Age
From **18 years** old to **50 years** old
Gender
Both

Phase
2-3
Groups that have been masked

- Participant
- Outcome assessor
- Data analyser

Sample size
Target sample size: **105**
Randomization (investigator's opinion)
Randomized
Randomization description
Simple individual randomization with randomization with envelopes in 3 groups A and B and C. In this method, we selected a number of cards or letters as an intervention group and the same number of cards for the control group, then the cards were merged. One card was taken out and its allocation was registered and the card was returned to the other cards after leaving. Then the cards are merged again and we remove another card. This process continues to reach a random sequence according to sample size.
Blinding (investigator's opinion)
Double blinded
Blinding description
This study is double blind. Researcher who complete questionnaire and analyzer and participant are blind (double blind). Outcome assessor and analyzer don't aware from grouping.The person evaluating the outcome is unaware of the grouping. Groups A and B and C are available to analyzer and outcome assessor.

Health conditions studied

1

Description of health condition studied
psychotics patient
ICD-10 code
F06.0
ICD-10 code description
Psychotic disorder with hallucinations due to known physiological condition

Primary outcomes

1

Description
Mean arterial pressure
Timepoint
At baseline, 1, 2, and 3 minutes after shock and after recovery
Method of measurement
Barometer

2

Description
Heart rate
Timepoint
At baseline, 1, 2, and 3 minutes after shock and after recovery
Method of measurement
Count

3

Description
Oxygen saturation percentage
Timepoint
At baseline, 1, 2, and 3 minutes after shock and after recovery
Method of measurement
Pulse oximetry

4

Description
Duration of seizures
Timepoint
After electro convulsive therapy
Method of measurement
Minute

Secondary outcomes

empty

Intervention groups

1

Description
Intervention group1: We will inject Remifentanil 1 milligram in kilogram (Produced by Normon Company) and Propofol 1 milligram in kilogram.
Category
Treatment - Drugs

2

Description
Intervention group2: We will inject Ketamin 1 milligram in kilogram (Ferdows & Razi company) and Propofol 1 milligram in kilogram.
Category
Treatment - Drugs

3

Description
Control group: We will inject distilled water and propofol 1 milligram in kilogram.
Category
Treatment - Drugs
