The Effect of Continuous Care Model On Control of Signs & Recurrence Among The Children With Nephritic Syndrome

Protocol summary

Summary

Main goal of the study: The effect of continuous care model on control of signs & recurrence among the children with Nephritic Syndrome, Inclusion criteria: 1- Passing at least 3 months from nephritic syndrome onset in the children 2- Not to be affected child and his or her parents to the problems such as mental retardation, mental illness... 3- The consent of child and his or her parents to participate in this study Exclusion criteria: 1- If during the study, sensitive and dependent nephritic syndrome disease in the patient changes to resistant nephritic syndrome 2- If patient and his or her parents are affected by any physical disease associated with nephritic syndrome during the study 3- If patient and his or her parents participate only in two educational sessions instead of six sessions The study population: Children 7 to 12 years old with nephritic syndrome are referring to the specialized clinic of Abazar Hospital The sample size: 66 children with nephritic syndrome Interventional Study: Continuous care model Time of interventional study: Generally six months is considered for this intervention. Continuous care model is included four stages: 1- Orientation 2- Sensitization 3- Control 4- Evaluation Generally, 6 weeks considered for orientation and sensitization stages and And the rest of the 6 months considered would be paid for the remaining two phases. The primary outcome: Values obtained from the control of the dependent variables are recorded before the intervention in the two groups

Scientific title

The Effect of Continuous Care Model On Control of Signs & Recurrence Among The Children With Nephritic Syndrome

Public title

Control of Signs & Recurrence of Nephritic Syndrome

Purpose

Supportive

Inclusion/Exclusion criteria

Inclusion criteria: 1- Passing at least 3 months from nephritic syndrome onset in the children 2- Not to be affected child and his or her parents to the problems such as mental retardation, mental illness... 3- The consent of child and his or her parents to participate in this study Exclusion criteria: 1- If during the study, sensitive and dependent nephritic syndrome disease in the patient changes to resistant nephritic syndrome 2-If patient and his or her parents are affected by any physical disease associated with nephritic syndrome during the study 3- If patient and his or her parents participate only in two educational sessions

Age

From **7 years** old to **12 years** old

Gender

Both

Phase

N/A

Health conditions studied

1

Description of health condition studied

Nephrotic Syndrome

ICD-10 code

N04

ICD-10 code description

Isolated proteinuria with specified morphological lesion

Primary outcomes

1

Description

TG,Chol

Timepoint

before & after study

Method of measurement

A blood test & check the lipid

2

Description

Proteinuria

Timepoint

during and after the study

Method of measurement

A urin test & check the Proteinuria

3

Description

Body weight

Timepoint

before & after study

Method of measurement

Using analog scale SECA mark

4

Description

Blood presure

Timepoint

before & after study

Method of measurement

Using a pressure gauge ALPK2 model

5

Description

Knowledge

Timepoint

before & after study

Method of measurement

questionnaire regarding the knowledge rate of parents about symptoms of the nephrotic syndrome disease recurrence

6

Description

Recurrence and control of signs of nephrotic syndrome

Ahvaz

Timepoint

Before the intervention, and three months after intervention

Method of measurement

Bp measured by a counterclockwise pressure cuff on Mark ALPK2 on mmHg, BW measured by Branded analogue scales SECA, Measurement of lipid per dl / mg, Urine test for the presence of protein in the urine using reagent strips in scale, 0 to + + + + partial, To measure the reliability and validity of a questionnaire to assess knowledge has been approved by the Faculty of Medical Sciences.

Secondary outcomes

empty

Intervention groups

1

Description

Case group : After collecting basic data, a questionnaire on demographic characteristics and also measuring blood pressure, Triglyceride and Cholesterol, weight and urine tests , continuous care model which is an in turn educational model with a six months follow up and its effect on the mentioned variables, will be implemented in the international group.

Category

Other

2

Description

Control group : In this study after collecting demographic data and measuring of body weight, blood pressure, triglyceride and cholesterol and record of recurrence, Continuous Care Model won't be done on control group. Finally, values of the body weight, blood pressure, triglyceride and cholesterol & record of recurrence from two groups) will check and then will compare with each other.
