Effect of Humulus Lupulus on early menopausal symptoms in menopausal and perimenopausal women: A Randomised Controlled Trial

Protocol summary

Summary

This study aims to determine the effect of Humulus Lupulus on early menopause symptoms in menopausal and perimenopausal women. Design: Two parallel arm Randomized Controlled Trial. Setting and conduct: This study will be conducted in health centers of Tabriz city-Iran. A person from research team not involved in the recruitment and assigning participants will generate allocation sequence using a computerized program. Opaque sealed sequentially numbered envelops will be used for allocation concealment. Eligible women will be randomly assigned into two groups of 60 subjects with block sizes of 4 and 6, stratified by menopausal status. Participants: 120 menopausal or perimenopausal married women aged 40 to 60 years old suffering from early menopause symptoms. Interventions: The intervention group will receive Humulus Lupulus tablet daily for 90 days and the control group will receive placebo tablet daily for 90 days. To ensure of taking of drugs, the researcher will contact with participants during 2, 6 and 10 weeks by phone. Main outcome measures: Early menopause symptoms and hot flushes number will be assessed by the Greene Scale and checklist respectively at baseline, 4, 8 and 12 weeks after starting the intervention

Health conditions studied

1

Description of health condition studied
Menopause

ICD-10 code
N95.1, N95

ICD-10 code description
Menopausal and female climacteric states, Other specified menopausal and perimenopausal disorders

Primary outcomes

1

Description
Total and subdomains scores of early menopause symptoms in perimenopausal women

Timepoint
Before intervention, 4, 8 and 12 weeks after intervention

Method of measurement
Greene scale

2

Description
Total and subdomains scores of early menopause symptoms in postmenopausal women

Timepoint
Before intervention, 4, 8 and 12 weeks after intervention

Method of measurement
Greene scale

3

Description
Frequency of hot flashes in perimenopausal women

Timepoint
Before interventions, 4, 8 and 12 weeks after intervention

Method of measurement
Checklist for daily counts

4

Description
Frequency of hot flashes in postmenopausal women

Timepoint
Before intervention, 4, 8 and 12 weeks after intervention

Method of measurement
Checklist for daily counts

Secondary outcomes

1

Description
Comparison of the effect of Humulus Lupulus on early menopause symptoms and frequency of hot flushes in postmenopausal and perimenopausal women
Timepoint
4, 8 and 12 weeks after intervention
Method of measurement
Greene scale and Checklist for daily counts

Intervention groups

1

Description
The intervention group will receive 500 mg Humulus Lupulus tablet daily for 90 days. Glandular powder separated from the strobiles of the Humulus lupulus (hops) plant will be used for making tablets
Category
Treatment - Drugs

2

Description
The control group will receive 500 mg placebo tablet daily for 90 days. Placebo tablets contain lactose
Category
Placebo
