Effect of counselling with men on the perceived stress and social support of their pregnant wives: a randomized controlled trial

Protocol summary

Summary

Objectives: To determine the effect of counseling with men on perceived stress and social support of their pregnant wives. Design: Randomized controlled trial. Conduct: This study will be conducted on spouses of pregnant women referring to health centers of Ardebil city. The researcher will refer to health centers and will select pregnant women with gestational age of 20 to 24 weeks according to their records, then will call them and they will be invited to be present at the health center with their spouses. In face to face session, the questionnaires of social support will be completed and the women who obtain low and moderate score will be included in study and written consent will be obtained. Other questionnaires including perceived stress, Edinburgh depression and anxiety for pregnant women and perceived stress and anxiety questionnaires for men will be completed. Participants will be randomly assigned into two groups of counseling and control through block randomization. Participants: 102 pregnant women with gestational age of 20 to 24 weeks. Intervention: For the intervention group will be provided six 60-minute group sessions once a week. The control group will receive routine cares. The main outcome variables include stress and social support that will be assessed four weeks after the intervention through perceived stress and social support questionnaires. The secondary outcomes are depression and anxiety that will be assessed through questionnaires of Edinburgh depression and Spielberger anxiety. The neonatal anthropometric indices, delivery type and mothers' weight gain will be recorded according to childbirth file.

Health conditions studied

1

Description of health condition studied
Stress
ICD-10 code
Z73.3
ICD-10 code description
Stress, not elsewhere classified

Primary outcomes

1

Description
Perceived stress
Timepoint
Before intervention and 4 weeks after the end of intervention
Method of measurement
Perceived Stress Scale

2

Description
Perceived social support
Timepoint
Before intervention and 4 weeks after the end of intervention
Method of measurement
Perceived social support scale

Secondary outcomes

1

Description
Anexiety
Timepoint
Before intervention and 4 weeks after the end of intervention
Method of measurement
Spielberger State-Trait Anxiety Inventory

2

Description
Depression
Timepoint
Before intervention and 4 weeks after the end of intervention
Method of measurement
Edinburgh Depression Scale

3

Description
Neonatal anthropometric indices
Timepoint
After childbirth
Method of measurement

Childbirth file

4

Description
Delivery type
Timepoint
After childbirth
Method of measurement
Childbirth file

5

Description
Weight gain rate during pregnancy
Timepoint
After childbirth
Method of measurement
Pregnancy file

Intervention groups

1

Description
For the intervention group will be provided six 60-minute group sessions once a week.
Category
Behavior

2

Description
The control group will receive routin prenatal cares.
