Comparison of associated complications between supraclavicular and subclavicular methods in subclavian vein catheterization

Protocol summary

Summary

In this study, we compare complications between supraclavicular and subclavicular methods in subclavian vein catheterization in patients who undergoing cardiac surgery. The patients will be studied in two groups randomly. Numbers of patients in this study are 280. Inclusion criteria: All patients between 25 to 100 years old that candidate for cardiac surgery. Exclusion criteria: Previously thoracic surgery and infection in catheterization site. Complications of catheter placement detect with surgeon and chest x-ray and manage by surgeon and anesthesiologist.

Health conditions studied**1****Description of health condition studied**

Medical devices associated with adverse incidents in
diagnostic and therapeutic use

ICD-10 code

Y70, Y82

ICD-10 code description

Medical devices associated with adverse incidents in
diagnostic and therapeutic use

Primary outcomes**1****Description**

Catheter malposition

Timepoint

One day after surgery

Method of measurement

Chest X- ray

Secondary outcomes**1****Description**

Injury to subclavian artery

Timepoint

During catheterization

Method of measurement

Observation by physician

Intervention groups**1****Description**

The catheter will be inserted in right subclavein vein by
supraclavicular method.

Category

Prevention

2**Description**

The catheter will be inserted in right subclavein vein by
infraclavicular method.
