

Clinical Trial Protocol

Iranian Registry of Clinical Trials

17 Sep 2026

Identification and modification of rheological properties of beverages, desserts, and food in patients with esophagus cancer dysphagia and assessment of the rheological modification on improving nutritional indices and quality of life in these patients

Protocol summary

Summary

The purpose of present study is the modification of rheological properties of beverages, desserts, and foods for dysphagic patients. 40 patients of Atrak clinic (who are in the second phase of esophagus cancer) are divided into two groups. First group are using their conventional diet and the second group uses modified foodstuffs. The effect of the rheological modification on improving nutritional status and the quality of life in these patients will be assessed in an open-label clinical trial, after 3 month.

Scientific title

Identification and modification of rheological properties of beverages, desserts, and food in patients with esophagus cancer dysphagia and assessment of the rheological modification on improving nutritional indices and quality of life in these patients

Public title

Identification of rheological properties of desirable foodstuffs for Iranian dysphagic patients

Purpose

Supportive

Inclusion/Exclusion criteria

Inclusion criteria: patients who have esophageal dysphagia (from esophageous cancer); patients are in the second phase of esophageous cancer (starting chemotherapy). Exclusion criteria: the tendency of samples to exclude from study.

Age

No age limit
