Educational counseling based on Health Belief Model on knowledge and practices on breast cancer screening among women above 40years old in Hamadan 2015

Protocol summary

Summary

Breast cancer is the leading cancer among Iranian women. However, the rate of breast cancer screening is low in Iranian women. This study aims to examine the use of the health belief model in enhancing women's breast cancer beliefs and screening behaviours in Hamadan, Iran. Methods: A multi-stage random sampling will be used for selection of women. 144 women from selected health care centres in the Hamadan will be selected in year 2015. Using a questionnaire data will collect on demographic background, knowledge, beliefs on breast cancer based on HBM and practices on breast cancer screening (BCS). Data will analysis using SPSS package version 16. The result will show how women's beliefs and knowledge play roles for breast cancer screening.
