The effect of health-promoting behaviors utilization counseling on mother's quality of life during Post-Partum Period

Protocol summary

Summary

The aim of this study is to determine the effect of health-promoting behaviors utilization counseling on mother's quality of life during Post-Partum Period. To perform this advisory from Pender Health Promotion Model was used. This study is a randomized clinical trial study that implement in the two experimental and control groups. Population of this study are mothers attending to health centers during the Post partum Period. Sampling is done through random permutation block. A sample of 58 patients in the intervention group and 58 patients in the control group will determined. Inclusion criteria are: nulliparous mothers, to participate in other training classes during pregnancy and after childbirth, natural childbirth. Exclusion criteria were: absence of more than one meeting in each parent counseling, Postpartum complications, such as infection or bleeding, fetal death during the first six weeks after birth. Intervention consists of three sessions of health-promoting behaviors counseling on days 5-3, 15-10 and 20- 17 after delivery by the investigator to be held. The control group only received routine care after delivery. Comparison will done between two groups on the Quality of life, health-promoting behaviors, self-efficacy, social support and perceived barriers in health-promoting behaviors. Outcome of this study may improve the quality of life of mothers in the Postpartum Period.
