

Clinical Trial Protocol

Iranian Registry of Clinical Trials

30 Jul 2026

Evaluation of the effect of consultation based on Bristol tool on self-efficacy and continuation of breast-feeding among primi-parous women undergoing cesarean section.

Protocol summary

Summary

Objectives: the aim of this study is to determine the effect of consultation based on Bristol tool on self-efficacy and continuation of breast-feeding among primiparous mothers undergoing Cesarean section in Fatemeh Hospital, Hamadan city, Iran, 2017. Design: This study is an experimental study with two intervention and control groups. Participants: the study participants are 80 mothers undergoing Cesarean section. They will be selected by convenience sampling (40 in each group). The samples will be allocated into the intervention and control groups using eight block method. Setting and conduct study: Before consultation, participants will complete a consent form. Then, data will be gathered using a questionnaire including demographic characteristics, self-efficacy and continuation of breast-feeding. Intervention: for intervention group, check list of Bristol assessment tool will be completed by the researcher. Based on this assessment tool, breast-feeding consultation will be done for 4 sessions. Individual breastfeeding counseling will be conducted at two hours, second day, one week and one month after delivery. Also at first session, mothers will receive educational booklet about breastfeeding. Then follow up via telephone will be done in the 1st, 2nd, 3rd and 4th months after delivery for evaluation of mothers' breastfeeding problems. During this period, mothers in control group will receive only routine care. Four months after delivery, questionnaires will be completed again by the participant of both groups and they will be compared on self-efficacy and continuation of breast-feeding.

Health conditions studied

1

Description of health condition studied

Breast-feeding disorders among mothers undergoing Cesarean section

ICD-10 code

O92.2

ICD-10 code description

Other and unspecified disorders of breast associated with childbirth

Primary outcomes

1

Description

Mother's self-efficacy in breastfeeding

Timepoint

2 hours after delivery, second day after delivery, 7 to 10 days after delivery, one month after delivery and four months after delivery

Method of measurement

Breastfeeding Self-Efficacy

Secondary outcomes

1

Description

Maintaining of exclusive breastfeeding

Timepoint

2 hours after delivery, second day after delivery, 7 to 10 days after delivery, one month after delivery and four months after delivery

Method of measurement

Breast-feeding checklist

Intervention groups

1

Description

Intervention: for intervention group, check list of Bristol assessment tool will be completed by the researcher. Based on this assessment tool, breast-feeding consultation will be done for 4 sessions. Individual breastfeeding counseling will be conducted at two hours, second day, one week and one month after delivery. Also at first session, mothers will receive educational booklet about breastfeeding. Then follow up via telephone will be done in the 1st, 2nd, 3rd and 4th months after delivery for evaluation of mothers' breastfeeding problems. Four months after delivery, questionnaires will be completed again by the participant of both groups and they will be compared on self-efficacy and continuation of breast-feeding.
