effect of pomegranate seed oil on hyperlipidemic subjects: a double-blind placebo-controlled clinical trial

Protocol summary

Summary

The present study has been designed to investigate the effect of PSO supplementation on lipid profiles of hyperlipidemic subjects. The study has a randomized, double-blind and placebo-controlled design. Sixty-six hyperlipidemic subjects (serum cholesterol > 200 mg/dl and serum triglycerides > 150 mg/dl) are to be recruited from an endocrine clinic using a sequential clinical trial design and randomly assigned into groups, the PSO (n =33) and placebo (n =33) groups, for all of whom demographic data and medical history at baseline will be documented, and subjects will be given capsules containing either PSO or placebo for four weeks. The PSO group will consume PSO capsules, containing 400 mg PSO twice daily (800 mg PSO), while controls will take placebo capsules with the same dosage. Measurements of anthropometric indexes, body composition, blood pressure and physical activity, and 3 consecutive dietary recalls will be obtained at baseline and 4 weeks after supplementation. At baseline and after 4 weeks, medication and supplement use will be recorded in a questionnaire, and for biochemical measurements, after 12 to 14 hours overnight fasting, blood samples will be taken for biochemical analysis, including cholesterol, triglycerides, LDL-C, HDL-C, ox-LDL, insulin and of fasting plasma samples.

General information

Acronym

effect of pomegranate seed oil on hyperlipidemia

IRCT registration information

IRCT registration number: **IRCT138711151640N1**

Registration date: **2009-07-16, 1388/04/25**

Registration timing: **retrospective**

Scientific title

effect of pomegranate seed oil on hyperlipidemic subjects: a double-blind placebo-controlled clinical trial

Public title

pomegranate seed oil study

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria: serum cholesterol concentrations > 200 mg/dl , serum triglyceride concentration > 150 mg/dl, age more than 20 years, body mass index \leq 35 kg/m² Exclusion criteria: being pregnant or lactating, diagnosed allergy and liver dysfunction

Age

From **20 years** old to **70 years** old

Gender

Both

Phase

N/A

Groups that have been masked

No information

Sample size

Target sample size: **66**

Health conditions studied

1

Description of health condition studied

hyperlipidemia

ICD-10 code

E78

ICD-10 code description

Disorders of lipoprotein metabolism and other lipidaemias

Primary outcomes

1

Description

lipid profile concentration

Timepoint

1 month

Method of measurement

biochemical measurements on blood sample

Secondary outcomes

1

Description

hyperlipidemia

Timepoint

1 month

Method of measurement

biochemical measurements on blood sample

Intervention groups

1

Description

Pomegranate seed oil capsule, containing 400 mg PSO, twice daily (800 mg PSO) for 4 weeks

Category

Treatment - Drugs

2

Description

Placebo capsule

Category

Placebo
