The effect of sex education on sexual function and sexual satisfaction in young couples

Protocol summary

Summary

Sexual desire and motivation is one of the basic needs of couples for marriage and having sex. However, sexual desire alone is not enough for sex or sexual activities, so many problems associated with the absence of knowledge and skill of sexual activities. Therefore purpose of this study is, The effect of Sexual behavior education on sexual function and marital satisfaction. The clinical trial methodology is double-blind on 100 eligible young couples (40-18 years old) will be fill the sexual function questionnaire by Rosen and marital satisfaction questionnaire by enrich and then collect data. Available participants enrolled and then randomly divided in to either the intervention group and the control groups. In the intervention group training class will be held by a psychiatrist male and female. However there is not any interference in the control group. One month after education classes, sexual function and marital satisfaction questionnaire completed again by both groups. At last, the result were analyzed.
