

Clinical Trial Protocol

Iranian Registry of Clinical Trials

16 Sep 2026

Cardiac autonomic system responses to oral administration of Hydroxyzine hydrochloride in male healthy subjects.

Protocol summary

Summary

Hydroxyzine is a first-generation antihistamine of the diphenylmethane and piperazine class. Due to its antagonistic effects on several receptor systems in the brain, hydroxyzine is claimed to have strong anxiolytic and mild antiobsessive as well as antipsychotic properties. Studies of heart rate variability (HRV) present a noninvasive, simple, and quantitative tool of evaluating autonomic performance on the heart. In this study, we intend to assess the effects of acute oral Hydroxyzine on heart rate variability (HRV). The Hydroxyzine (doses of 5, 10 and 20 mg) or placebo administer in four different testing sessions. The 15 healthy subjects would included in the study. In ever session, power spectral analysis of HRV parameters will assess in the supine position before and after the participants were given placebo or different doses of Hydroxyzine.

Scientific title

Cardiac autonomic system responses to oral administration of Hydroxyzine hydrochloride in male healthy subjects.

Public title

Effect of oral Hydroxyzine on heart rate variability

Purpose

Prevention

Inclusion/Exclusion criteria

Inclusion criteria: male; ages between 19-24 years old.

Exclusion criteria: chronic disease (i.e. diabetes mellitus, hypertension, epilepsy and etc); smoker; under regular medication .

Age

From **19 years** old to **24 years** old

Gender

Male

Phase

N/A

Groups that have been masked
No information

Sample size
Target sample size: 15

Randomization (investigator's opinion)
Randomized

Health conditions studied

1

Description of health condition studied
Healthy

ICD-10 code

ICD-10 code description

Primary outcomes

1

Description
mean of RR interval

Timepoint
before and after administration of placebo or drug

Method of measurement
Time domain analysis of ECG

Secondary outcomes

1

Description
Standard deviation of RR interval

Timepoint
before and after administration of placebo or drug

Method of measurement
Time domain analysis of ECG

2

Description
High frequency power spectrum

Timepoint
before and after administration of placebo or drug

Method of measurement
Frequency domain analysis of ECG

Intervention groups

1

Description
Oral administration of 10 mg Hydroxyzine

Category
Treatment - Drugs

2

Description
Oral administration of 5 mg Hydroxyzine

Category
Treatment - Drugs

3

Description
Oral administration of placebo.

Category
Placebo

4

Description
Oral administration of 20 mg Hydroxyzine

Category
Treatment - Drugs
