Comparison of the treatment's efficacy of micropunch grafting versus follicular grafting in the treatment resistance vitiligo

Protocol summary

Summary

1- Objective: Comparison of the treatment's efficacy of micropunch grafting versus follicular grafting in the treatment resistance vitiligo. 2- Design: Non randomized clinical trial, not blinded. 3- Setting & conduct: 25 patients suffering the treatment resistance vitiligo, aged 12-60 were selected. In one side of vitiligo lesions hair follicle graft were implemented. In the other side the vitiligo lesions, skin punch graft were done. The patients were visited after a week to evaluate the success of the transplant and possible side effects. Patients follow up were implemented up to 6 months. The repigmentation's diameter were measured by ruler and recorded. 4- Participants: Inclusion criteria: Patients diagnosed as stable (with no new lesions, or no progression of previous lesions during a recent year) treatment resistance vitiligo, not pregnant or breast feed and aged between 12 to 60 years. Exclusion criteria: Patients diagnosed as non stable vitiligo (with new lesions, or progression of previous lesions during a recent year), pregnant or breast feed, aged under 12 or over 60 years. 5- Intervention: Hair follicular graft and micropunch skin graft are administering in each patient. 6- Main outcome measures variables: Measurement of repigmentation's degree.
