Evaluation the Effect of Silymarin on Inflammatory Markers in Comparison with Placebo in β-thalassemia Patients undergoing Iron Chelation Therapy

Protocol summary

Summary

A randomized, double-blind and crossover trial was performed on 70 beta thalassemia patients at the Thalassemia Research Center in Mazandaran University of Medical Sciences. The aim of this study was to determine of silymarin effects on serum inflammatory indexes in comparison with placebo in β-thalassemia patients undergoing iron chelation therapy. This study had been designed in three phases. During the first phase, patients were received silymarin tablet (420 mg - three times a day) or placebo tablet (three times a day) for 12-weeks. Phase 2 was a washout phase during 2-weeks. During phase 3, patients who randomly were assigned to receive silymarin were changed to receive placebo. Also, patients randomly were assigned to receive placebo during phase 1 were changed to receive silymarin. Plasma CRP, interleukin-6 and interleukin-10 level were measured immediately before and after each period.

Scientific title

Evaluation the Effect of Silymarin on Inflammatory Markers in Comparison with Placebo in β-thalassemia Patients undergoing Iron Chelation Therapy

Public title

Effect of Silymarin on Inflammatory Markers in β-thalassemia Patients

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria: Patients with beta thalassemia major; History of iron chelation therapy for at least 2 years; Having relatively constant average dose of iron chelation during 3 months ago; Ferritin up to 1000 µg/L Exclusion

criteria: Change therapeutic regimen with iron chelation during the study (6 months)

Age
From **18 years** old to **60 years** old

Gender
Both

Phase
2-3

Groups that have been masked
No information

Sample size
Target sample size: **70**

Randomization (investigator's opinion)
Randomized

Randomization description

Blinding (investigator's opinion)
Triple blinded

Ethics committee

Name of ethics committee
Mazandaran University of Medical Sciences

Street address
7 km of sea road, Mazandaran University of Medical Sciences, Sari, Mazandaran, Iran.

City
Sari

Postal code

Approval date
2014-10-23, 1393/08/01

Ethics committee reference number
1126

Health conditions studied

1

Description of health condition studied
Thalassaemia

ICD-10 code
D56.1

ICD-10 code description
Beta thalassaemia

Primary outcomes

1

Description
Serum malondialdehyde, carbonyl protein and total anti-oxidant of serum level

Timepoint
1-Before the first phase 2- After the washout period (after 2 weeks of the end of the first phase) 3- After the third phase (after 26 weeks)

Method of measurement
Before the first phase - After the washout period -After the third phase

Secondary outcomes

empty

Intervention groups

1

Description
Patients in the intervention group received 420 milligrams of silymarin tablets, three times per day for 3 months.

Category
Treatment - Drugs

2

Description
Patients in the control group received placebo tablets, three times per day for 3 months.

Category
Placebo
