### A Comparison Between Effect of Aripiprazole and Placebo on the Rate of Nicotine Dependence in Schizophrenic patients

#### Protocol summary

##### Summary

The main objective of the project: Assessment of the effect of Aripiprazole on smoking rate in the schizophrenic patients. Study design: a randomized, controlled, before-after, tripple blind clinical trial Study population: 40 patients with schizophrenia will be selected among the patients admitted to the psychiatric clinics of Tabriz by simple (available) method sampling and considering inclusion and exclusion criteria. Then the patients are divided into two groups by respective pairing method. Inclusion criteria : diagnosis of schizophrenia according to DSM IV TR criteria using semi-structured interviews, having necessary criteria for the diagnosis of nicotine dependence criteria according to DSM IV TR Exclusion Criteria: a history of allergy or any side effect due to Aripiprazole or other antipsychotics, dependency to other substances (based on the patient's history and morphine and methamphetamine test results at the time of intervention), use of other drugs used for nicotine withdrawal, active phase of psychosis. First, Using FTQ questionnaire, smoking rates are determined in each patient, then the intervention group will receive a daily dose of 10 mg Aripiprazole for 6 weeks and the control group will receive placebo. During the intervention, the patients are not required to stop smoking. After 6 weeks the smoking rates are measured by FTQ questionair in all patients again. Finally the data are analyzed using the statistical software SPSS 19.

F20

#### **ICD-10 code description**

The schizophrenic disorders are characterized in general by fundamental and characteristic distortions of thinking and perception, and affects that are inappropriate or blunted. Clear consciousness and intellectual capacity are usually maintained although

## **Primary outcomes**

### **1**

#### **Description**

the rate of nicotine dependence

#### **Timepoint**

before intervention and 6 weeks after intervention

#### **Method of measurement**

Nicotine Dependence Questionnaire (FAGERSTROM)

## **Secondary outcomes**

### **1**

#### **Description**

extrapyramidal side effects

#### **Timepoint**

before intervention and 6 weeks after intervention

#### **Method of measurement**

abnormal involuntary movement scale

## **Intervention groups**

### **1**

#### **Description**

intervention group: tablet Aripiprazole, 10 mg, once daily, for 6 weeks

#### **Category**

Treatment - Drugs

### **2**

#### **Description**

control group: placebo, one tablet daily, for 6 weeks

#### **Category**

Placebo
