Comparison of intravenous haloperidol and midazolam effects on patients' symptoms with conversion disorders referred to emergency department

Protocol summary

Summary

The purpose of this study was to comparison of intravenous haloperidol and midazolam effects on patients' symptoms with conversion disorders referred to emergency department. In this double blinded clinical trial 140 patients aged 18- 60 years old with conversion disorders referred to emergency department in 1394-1396 were involved. Patients with abnormal vital signs, younger than 18 and older than 60 years old, pregnancy, history of drug abuse, hepatic and renal disorders and history of epilepsy were excluded. patients were randomly divided in two groups: haloperidol or midazolam. In hallopridol group, patients received intravenous haloperidol 2.5 mg and in midazolam group patients received intravenous midazolam 2.5 mg too. Cardiac monitoring and direct observation was performed by resident. Sensory and movement disorders and consciousness degree was recorded before and after the intervention. Recovery degree, recovery duration and drug side effects was recorded too.
