Scientific title

Pilates exercise and Aktyvrayj compare the range of motion and edema upper limb after surgery in patients with breast cancer

Public title

Effect Pilates exercise on range of motion and upper extremity edema in the mastectomy

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria: women with breast cancer Exclusion criteria: women who had a history of surgery! women who have a history of certain diseases! women who had

a history of chemotherapy

Age
From **20 years** old to **55 years** old

Gender
Female

Phase
N/A

Groups that have been masked
No information

Sample size
Target sample size: **40**

Randomization (investigator's opinion)
Randomized

Health conditions studied

1

Description of health condition studied
breast cancer

ICD-10 code
C50.6

ICD-10 code description
Axillary tail of breast

Primary outcomes

1

Description
range of motion

Timepoint
Before and After Intervention

Method of measurement
Goniometer

2

Description
Edema

Timepoint
Before and After Intervention

Method of measurement
Tape

Secondary outcomes

empty

Intervention groups

1

Description
The intervention group consisted of Pilates exercise was performed for 15 patients were fatigue session border movements of 3 repetitions to 10 repetitions and repeat the treatment.

Category
Rehabilitation

2

Description
Common practice in physiotherapy intervention control group consisted of patients who were administered.

Category
Rehabilitation
