Comparative of two surgical methods in the treatment of pediatrics with hydrocele

Protocol summary

Summary

This study is a single blind, randomized clinical trial. The purpose of this study is comparison between recurrence and complications of two methods of surgery (hydrocelectomy and hydrocelectomy) in the treatment of hydrocele in pediatrics who are candidates for surgical in Imam Reza hospital of Kermanshah. A total of 70 patients are randomly allocated into two groups surgery (hydrocelectomy or hydrocelectomy). Both groups will be followed and compared at first week, third month and sixth month after surgery for recurrence and complications (Damage to spermatic vessels and cord element, bleeding, wound infection, and hematoma).

Health conditions studied

1

Description of health condition studied

hydrocele

ICD-10 code

N43.3

ICD-10 code description

hydrocele of spermatic cord, testis or tunica vaginalis

Primary outcomes

1

Description

Recurrence

Timepoint

At the first week, third and sixth months

Method of measurement

corresponding to physical examination

Secondary outcomes

1

Description

Hematoma

Timepoint

At the first week, third and sixth months

Method of measurement

corresponding to physical examination

2

Description

Damage to spermatic vessels and cord element

Timepoint

At the first week, third and sixth months

Method of measurement

corresponding to physical examination

3

Description

bleeding

Timepoint

At the first week, third and sixth months

Method of measurement

corresponding to physical examination

4

Description

wound infection

Timepoint

At the first week, third and sixth months
