Comparison the effects of Psyllium seed husk powder Vs. Polyethylene glycol with and without probiotics in functional constipation of 2 to 10 year-old children

Protocol summary

Summary

Objective: To compare the effects of Psyllium vs Polyethylene glycol with and without probiotics in pediatric functional constipation. Study design: Parallel triple-blind randomized controlled clinical trial. Random assignment will be done by the use of computer-generated random numbers. Inclusion criteria: Two to ten-year-old children with functional constipation, diagnosed based on the ROME III criteria, referred to children's clinic of Shahid Beheshti hospital. Exclusion criteria: Children beyond 2 and over 10 years old; use of other drugs that can cause constipation or diarrhea; or history of using pidrolax and probiotic in the last year. The subjects of the study: Children referred to children's clinic of Shahid Beheshti hospital. The sample size: 160 subjects will be divided into four groups of 40. The study duration: July 2017 to July 2018. Intervention of the study: Patients after receiving testimonial from their parents will be divided into 4 groups. Group one will receive polyethylene glycol, group two polyethylene glycol with probiotics, group three Psyllium and group four Psyllium with probiotics, all manufactured in the same sachets by Takgene zist company, 0.7 gr/kg in the form of water solution daily for 8 weeks. The patients will be followed up for 8 weeks. Primary outcomes: Assessing response to treatment with filling ROME III criteria based questionnaire by parents after 8 weeks of intervention, including frequency of defecation, defecation without pain and hardness, frequency of incontinence and drug admission in four groups. Secondary outcomes: Early relapse of constipation, according to ROME III criteria, after the end of intervention by filling the questionnaire.
