Assessment of the effect of three heparinization methods of hemodialysis set on coagulation condition and dialysis efficacy in 25 patients under hemodialysis in Fateme Zahra Hospital Mehriz(1392)

Protocol summary

Summary

In this clinical trial study 25 patients of ESRD under hemodialysis in Fateme Zahra Hospital Mehriz Yazd in 1392, by purpose to recognize the best methods of Dialysis set heparinization, is assessed and heparinated by one of three methods of heparinization(1 - 2500u heparin stat and two times 200cc N/S infusion 2 -2000u heparin stat and 1000u/h to 1hr before end of dialysis 3 -2500u heparin stat and 2500u 2hr later) .The PTT and UREA is checkek before and after of dialysis and assessed the different in two stages.The clot measurement is evaluated by one of four degree (no clot:0 - low clot:1 - moderate clot:2 - severe clot:3)in end of dialysis.This patients must be tolerated 4 hr Dialysis and have not coagulation problems or blood transfusion from one week ago.For assessment of dialysis efficacy and coagulation condition PTT and UREA will check and compare before and after of dialysis .Coagulation scale is (no clot:no evidence of clot in dialysor,low clot:clot in 1/4 diameter of dialysor,moderate clot:clot in 1/4 to 1/2 diameter of dialysor,severe clot:clot in above of 1/2 diameter of dialysor). Assessment of clot will be reliable because the clot will observe by one person.Sampling,speed of dialysis,method of access,kind of dialysor,dialysis solution,temperature,hydration,system of dialysis machine,dialysis set ,... for whole samples is equal.

Scientific title

Assessment of the effect of three heparinization methods of hemodialysis set on coagulation condition and dialysis efficacy in 25 patients under hemodialysis in Fateme Zahra Hospital Mehriz(1392)

Public title

Effect of three heparinization methods of hemodialysis

set on coagulation condition and dialysis efficacy in patients under hemodialysis

Purpose

Prevention

Inclusion/Exclusion criteria

Inclusion criteria: Age above 14 years;End Stage Of Renal Disease disorder certificated by nephrologist;No coagulative disorder(Hemophilia; DIC);No oral anticoagulation drugs(Aspirin;Warfarin);No clinical symptoms of Infection ,No Blood transfusion from one week ago ,No susceptible to bleeding by assessment PTT (normal range 25-35 second before Dialysis) , Exclusion criteria: Acute Renal Failure;Emergency dialysis; Dialysis by shunt access;Hepatitis type B & C ; Guess patients;Intolerance of dialysis(severe hypotension;hemorrhagia) blood transfusion;Cancer

Age

From **14 years** old to **85 years** old

Gender

Both

Phase

Health conditions studied

1

Description of health condition studied

Chronic Renal Failure

ICD-10 code

N 17 - N 1

ICD-10 code description

Acute Renal Failure_ Unspecified Kidney Failure

Primary outcomes

1

Description

clot

Timepoint

after dialysis time

Method of measurement

check list,clot observation

2

Description

Dialysis Efficacy

Timepoint

Before and after of Dialysis

Method of measurement

Urea test an check list

3

Description

PTT measurement

Timepoint

before and after of dialysis

Method of measurement

PTT test and check list

Secondary outcomes

1

Description

clot

Timepoint

in time& end of dialysis

Method of measurement

check list ,PTT measurement by autoanalyser BT 3000,,
Urea measurement by autoanalyser BT 3000

Intervention groups

1

Description

Heparin injection by method:2500u stat before Dialysis in Arterial line and two times infusion 200cc N/S in Dialysis set .Each person is compared by own in the else method.

Category

Prevention

2

Description

Heparin injection by method:2000u stat before Dialysis in Arterial line & 1000u/h heparin drip by pump to 1 hour before end of dialysis. Each person is compared by own in the else method.

Category

Prevention

3

Description

Heparin injection by method: 2500u stat in Arterial line & 2500 u 2 hours later in Arterial line.Each person is compared by own in the else method.
