

Clinical Trial Protocol

Iranian Registry of Clinical Trials

18 Sep 2026

The effect of sesame-canola oil compared to sesame and canola oil on blood pressure, lipid profile and blood glucose control in patients with type 2 diabetes and their spouse: A three-way randomized cross-over clinical trial

Protocol summary

Study aim

To investigate the effect of replacing the regular oil consumption of participant (people with diabetes and their spouses) with sesame-canola (a blend of sesame and canola oil) in comparison with sesame oil and canola oil on blood pressure and cardiometabolic markers.

Design

Three-way randomized cross-over clinical trial

Settings and conduct

This study will be conducted at diabetes research center. All three types of oils will be provided for participants in the same packages labeled by a person who is not aware of the study objectives and protocol. Participants and personnel will be blinded to the intervention oil. Physical activity assessment, three-day weighted food record, anthropometric and blood pressure measurement will be conducted at the entrance, start, and the end of each intervention period and blood samples will also be taken from each participant (people with diabetes and their spouses) at the start and the end of each intervention period.

Participants/Inclusion and exclusion criteria

Patients with type 2 diabetes mellitus aged 18-60 years will be entered into the present study. Each participant will enter the study with his/her spouse. Participants on insulin therapy or a history of cardiovascular, kidney and liver diseases, and cancer will not be entered to the study.

Intervention groups

Each intervention period will last for nine weeks, four weeks apart as wash-out period (in which sunflower oil will be provided). The participants will be randomized using a software to receive sesame, canola and sesame-canola oils in each intervention period.

Main outcome variables

Serum total cholesterol, triglyceride, high density

lipoprotein cholesterol, low Density Lipoprotein cholesterol, and fasting blood sugar

Scientific title

The effect of sesame-canola oil compared to sesame and canola oil on blood pressure, lipid profile and blood glucose control in patients with type 2 diabetes and their spouse: A three-way randomized cross-over clinical trial

Public title

The effect of sesame-canola oil compared to sesame and canola oil on patients with type 2 diabetes and their spouse

Purpose

Treatment

Inclusion/Exclusion criteria**Inclusion criteria:**

Adults aged between 18-60 years old With clinically diagnosed type 2 diabetes for at least 6-month and maximum of 10 years With hemoglobin A1C lower than 8 percent Only take oral anti-hyperglycemic agents for the treatment have intention to enter the study and fill the informed consent

Exclusion criteria:

Being on insulin therapy History of known Cardiovascular Diseases (Coronary Artery Disease, Stroke, Congestive heart disease) Coronary artery bypass grafting (CABG) History of kidney or liver disease [alanine aminotransferase (ALT) and aspartate aminotransferase (AST) three times more than normal values] history of cancer Changing the dose of lipid lowering medications for at least 3 months prior starting the study being pregnant

AgeFrom **18 years** old to **60 years** old**Gender**

Sample sizeTarget sample size: **100****Randomization (investigator's opinion)**

Randomized

Randomization description

As a three-way randomized controlled clinical trial the eligible participants will be randomly assigned to one of six following rolling methods using the statistical package for social sciences software (SPSS): 1) Sesame-

canola, sesame, canola; 2) Sesame-canola, canola, sesame; 3) Canola, sesame-canola, sesame; 4) Canola, sesame, sesame-canola; 5) Sesame, sesame-canola, canola and 6) Sesame, canola, sesame-canola.

Blinding (investigator's opinion)

Triple blinded

Blinding description

In this study, blinding will be done for treatment oils for both researchers and participants. The oils will be given in the same 2.5-liter bottles and will be coded for each oils (canola, sesame and sesame-canola) by someone who are not enroll in the study design .

Primary outcomes

1

Description

Serum high density lipoprotein cholesterol (HDL-C)

Timepoint

start and the end of each intervention period

Method of measurement

Using Appropriate kits, by Alpha-Classic autoanalyzer

2

Description

Serum fasting blood sugar(FBS)

Timepoint

start and the end of each intervention period

Method of measurement

using Appropriate kits, by Alpha-Classic autoanalyzer

3

Description

Serum low Density Lipoprotein cholesterol (LDL-C)

Timepoint

start and the end of each intervention period

Method of measurement

Using Appropriate kits, by Alpha-Classic autoanalyzer

4

Description

Serum Total cholesterol

Timepoint

start and the end of each intervention period

Method of measurement

using Appropriate kits, by Alpha-Classic autoanalyzer

5

Description

Serum triglyceride level (TG)

Timepoint

start and the end of each intervention period

Title and more details about the data/document

baseline and after treatment data values of primary and
secondary outcome variables will be available for
researchers.

When the data will become available and for how long

Data will be available after the summary data become
published.

To whom data/document is available

The data will be available for all researchers interested in
the subject.

Under which criteria data/document could be used

Data will be available if the interested researcher(s) fills
the proposal for a joint project and the sponsor of the
study (Shahid Sadoughi University of Medical Sciences)
confirms the protocol of the project.

From where data/document is obtainable

The data can be obtained from Dr. Amin Salehi-
Abargouei, Ph.D. in Nutrition Department of Nutrition
Faculty of Public Health Shahid Sadoughi University of
Medical Sciences Yazd, PO Code 8915173160 Iran
Tel: +98-35-31492229 Fax: +98-35-38209119 Email:
abargouei@ssu.ac.ir Alternate email:
abargouei@gmail.com

What processes are involved for a request to access data/document

The interested investigators should provide a brief
description of the data needed and their reason for
asking the data by contacting the principal investigator.
The principal investigator will assess the possibility of
sharing the data and if applicable will ask for a joint
proposal. The joint proposal will be sent to the vice
chancellery for research, Shahid Sadoughi University of
Medical Sciences (the sponsor) and the data will be sent
by the principal investigator if the sponsor confirms the
cooperation.
