Effect of the Platelet-Rich Plasma (PRP) injection in primary manifestations of knee osteoarthritis in patients who refer to rheumatology clinic of Kowsar hospital, Semnan

Protocol summary

Summary

Purpose: Assessment the intra-articular injection effect of platelet-rich plasma (PRP) on symptoms of primary osteoarthritis. Study design: This study is a randomized, double-blind, placebo controlled, uni-center, 2-3 phase of clinical trials. Study population: patients with primary osteoarthritis of the knee who will refer to Kowsar hospital that are randomly selected. Main inclusion criteria: age 40-60 years, history of chronic knee pain for at least 12 months and a Kellgren-Lawrence radiological criterion. Main exclusion criteria: thrombocytopenia, antiplatelet drugs, corticosteroids, liver or kidney systemic disease, leukemia and lymphoma, congestive heart failure, myocardial infarction and arrhythmias, septic arthritis, intra-articular injection of steroids or hyaluronic acid during the last 6 months, smoking . Sample Size: 60 patients, 30 in the intervention group and 30 patients as control group Interventions: The intervention group patients received autologous PRP injections 3 CC in both knee and patients in control group received placebo injections (empty syring). Time of interventions: The patients will be assessed at initiation, 3 and 6 months after the intervention, using the IKDC, EQ VAS and Tegner criteria. Primary outcome: improving of IKDC, EQ-VAS and Tegner criteria in 3 and 6 months after injection of PRP in compare to before injection.

Primary outcomes

1

Description

Pain

Timepoint

Befor and 3 and 6 months after intervention

Method of measurement

IKDC, EQ-VAS and Tegner criteria

Secondary outcomes

1

Description

Physical Activities

Timepoint

6 months after intervantion

Method of measurement

IKDC, EQ-VAS and Tegner criteria

Intervention groups

1

Description

In the first group (N=30) 3 CC autologous PRP by a syringe which covered in aluminum foil will be intraarticularly injected. The patient is not aware of the contents of the syringe (real injections).

Category

Treatment - Drugs

2

Description

For patients in the control group (n=30) an empty syringe which covered by aluminum foil prepared and its needle enter up to 5 mm into skin and fat tissue without entering into the joint space (Pseudo injection).

Category

Treatment - Drugs
