Studying the Effects of Supportive Nursing Services on Satisfaction of Patients with Hypertension

Protocol summary

Summary

The main objective of this study is to determine the effects of supportive nursing services on satisfaction of patients with hypertension. The main inclusion criterion is patients within the ages of fifteen to eighty years old with diagnosed hypertension by doctor. The main exclusion criterion includes patient's unwillingness to participate in the study. The sampling method is convenient. Then, samples will be allocated to intervention and control groups. There are twenty-five persons in both case and control group. After performing pretest in both groups, intervention will be performed in intervention group in three days according to the patient's condition at least in three sections and a training manual containing guidelines to control and treat hypertension will be given to each case patient and therapeutic communication will be done during all three sections. The control group receives routine care. After the last day the post test will be performed in both case and control group. The collected data will be analyzed. The expected outcome of this study is to promote patient's satisfaction.

Intervention groups

1

Description

In this study intervention takes place in case group in three days (each day one session for at least twenty minutes for each patient). At the first day, familiarity and appropriate therapeutic communication with the patients takes place (calling the patients by their names, being an active listener, having eye contact, giving hope to the patients, pauses between conversations, allowing the patients for expressing feelings, giving correct information to the patients, saying clear information, being frank to the patients and summarizing the content). At the second day, patients are trained about their drug and food diet and how to control hypertension. At the third day, how to measure blood pressure will be taught and their questions will be answered, then a training manual is given to each patient. Therapeutic communication is considered in all three days.
