Comparison of performing and not performing the prophylactic surgery for urinary incontinence in advanced pelvic organ prolapse

Protocol summary

Summary

(1) Main outcome: Comparison of performing and not performing the prophylactic surgery for urinary incontinence in advanced pelvic organ (2) Design: Accidental (3) Setting and conduct: 60 patients with advanced pelvic organ prolapse without a history of urinary incontinence, enrolled into the study. (Patients with advanced pelvic organ prolapse who suffer from urinary incontinence are excluded from the study.) Randomly 30 patients undergo urinary incontinence surgery in addition to prolapse surgery (TOT+ Standard surgery) and 30 patients undergo prolapse surgery without urinary incontinence surgery (Standard surgery). Examination findings and ICIQ-SF questionnaire are recorded for all patients before surgery and 1 and 2 months after surgery. Patients will be followed up by phone or invitation to clinic for 2 months and asked if SUI is occurred. (4) Participants including major eligibility criteria: Sample size is 60 patients. Inclusion criteria are women with advanced pelvic prolapse without urinary incontinence symptoms. Exclusion criteria are women with advanced vaginal prolapse with urinary incontinence symptoms. (5) Intervention: Women with advanced pelvic organ prolapse without urinary incontinence undergo prophylactic surgery for urinary incontinence (TOT). Intervention is done concurrent with the standard surgery for advanced pelvic prolapse. (6) Main outcome measures (variables): Development of SUI after surgery.

Scientific title

Comparison of performing and not performing the prophylactic surgery for urinary incontinence in advanced pelvic organ prolapse

Public title

Comparison of performing and not performing the prophylactic surgery for urinary incontinence in

advanced pelvic organ prolapse

Purpose
Treatment

Inclusion/Exclusion criteria
Inclusion criteria: Women with advanced vaginal prolapse without urinary incontinence symptoms.
Exclusion criteria: Women with advanced vaginal prolapse with urinary incontinence symptoms; Women who are not candidate for surgery due to comorbidities.(cardiac, pulmonary, etc)

Age
No age limit

Gender
Female

Phase
2-3

Groups that have been masked
No information

Sample size
Target sample size: **60**

Health conditions studied

1

Description of health condition studied

Pelvic organ prolapse

ICD-10 code

N81

ICD-10 code description

Female genital prolapse

Primary outcomes

1

Description

Development of SUI after surgery

Timepoint

Before intervention, 1 month after intervention and 2 months after intervention.

Method of measurement

Standard questionnaire ICIQ-SF

Secondary outcomes

empty

Intervention groups

1

Description

Intervention group: 30 patients undergo urinary incontinence surgery in addition to prolapse surgery (Standard surgery+ TOT).

Category

Treatment - Surgery

2

Description

Control group: 30 patients undergo urinary incontinence surgery without prolapse surgery (Standard surgery).

Category

Treatment - Surgery
