Clinical Trial Protocol
Iranian Registry of Clinical Trials

06 Nov 2026

comparing the effectiveness of acceptance and commitment therapy (ACT), selective serotonin reuptake inhibitors (SSRIs), and the combination of ACT and SSRIs in the treatment of adults with OCD.

Protocol summary

Summary

The aim of this study was to compare the effectiveness of acceptance and commitment therapy , selective serotonin reuptake inhibitors, and the combination of acceptance and commitment therapy and selective serotonin reuptake inhibitors in the treatment of adults with Obsessive Compulsive Disorder. Thirty-two outpatients with Obsessive Compulsive Disorder were randomly assigned to one of three treatment conditions:acceptance and commitment therapy , selective serotonin reuptake inhibitors, and combined treatment. The Yale-Brown Obsessive-Compulsive Scale , Beck Depression Inventory-II-Second Edition , Beck Anxiety Inventory , World Health Organization Quality of Life-BREF , and Acceptance and Action Questionnaire were administered at pre - and post-treatment. The Yale-Brown Obsessive-Compulsive Scale , Beck Depression Inventory-II-Second Edition , Beck Anxiety Inventory , and Acceptance and Action Questionnaire were also administered in the middle treatment. Twenty-seven patients completed the study.Acceptance and commitment therapy was based on an acceptance and commitment therapy manual for OCD developed by Twohig (2007).The patients in drug group received a different selective serotonin reuptake inhibitor (sertraline=50-200 mg/d;fluoxetine=20-80 mg/d) for 10 weeks, which was monitored by two psychiatrist. The combination group received both ACT and a different selective serotonin reuptake inhibitor (sertraline=50-200 mg/d;fluoxetine=20-80 mg/d) for 10 weeks.

Scientific title

comparing the effectiveness of acceptance and commitment therapy (ACT), selective serotonin reuptake

inhibitors (SSRIs), and the combination of ACT and SSRIs in the treatment of adults with OCD.

Public title
Comparing The Effectiveness of Acceptance and Commitment Therapy,Pharmacotherapy.and their combination in the Treatment of Obsessive-Compulsive Disorder
Purpose
Treatment
Inclusion/Exclusion criteria
Inclusion criteria : a primary diagnosis of OCD according to DSM-IV-TR ; age between 18 to 50 years; OCD symptoms duration of at least 1year; Exclusion criteria: having a current or past psychotic disorder ; suicidal tendencies; medical illness ; substance abuse disorder ; personality disorder; had been treated with either pharmacotherapy or psychotherapy in the 1month preceding baseline;patients with other axis I disorders (except anxiety disorders and major depression disorder and dysthymia disorder) and axis II disorders
Age
From **18 years** old to **50 years** old
Gender
Both

Phase
N/A
Groups that have been masked
No information
Sample size
Target sample size: **44**
Randomization (investigator's opinion)

Health conditions studied

1

Description of health condition studied
Obsessive Compulsive Disorder
ICD-10 code
F42
ICD-10 code description
Obsessive-compulsive disorder

Primary outcomes

1

Description
obsessive - compulsive symptoms
Timepoint
pre-middle and post-treatment
Method of measurement
The Yale-Brown Obsessive-Compulsive Scale (Y-BOCS)

Secondary outcomes

1

Description
Depression
Timepoint
pre-middle and post treatment(tenth week)
Method of measurement
Beck Depression Inventory-II-Second Edition (BDI-II)

2

Description
Anxiety
Timepoint
pre-middle and post treatment(tenth week)
Method of measurement
Beck Anxiety Inventory (BAI)

3

Description
experiential avoidance
Timepoint
pre-middle and post treatment(tenth week)
Method of measurement
Acceptance and Action Questionnaire (AAQ)

4

Description
Quality of Life
Timepoint
pre-and post treatment(tenth week)
Method of measurement
World Health Organization Quality of Life-BREF

(WHOQOL-BREF)

Intervention groups

1

Description
ACT was based on an ACT manual for OCD developed by Twohig (10). A Ph.D. clinical psychologist (first author) under the supervision of an experienced clinical psychologist in treating OCD provided ACT. The ACT program included evaluating the patient's obsessions and compulsions (session 1); The "Man in the hole" metaphor was used to illustrate how the patient's efforts to regulate obsessions are ineffective (session 2); The " Tow scales " metaphor was used to illustrate the possible benefits of acceptance of obsessions and anxiety rather than attempting to control or reduce them (sessions 3 and 4); using defusion, contact with the present or mindfulness, and self as context exercises (sessions 5 and 6); recognize his values; and preventing relapse (sessions 7 and 8).

Category
Behavior

2

Description
The patients in drug group received a different SSRI (sertraline=50-200 mg/d;fluoxetine=20-80 mg/d) for 10 weeks, which was monitored by two psychiatrist.

Category
Treatment - Drugs

3

Description
The combination group received both ACT and a different SSRI (sertraline=50-200 mg/d;fluoxetine=20-80 mg/d) for 10 weeks.
