The effect of carnitine supplementation on adiponectin and leptin total antioxidant capacity concentrations in hemodialysis patients

Protocol summary

Summary

Chronic renal failure is a pathological process with multiple causes. More than a million people die annually due to the end stage renal disease. The most important cause of mortality in ESRD and hemodialysis patients is cardio vascular disease. Common causes to some extent higher risk factor for cardiovascular disease in hemodialysis patients. Several cytokines and hormones (so called adiponectin) are secreted from fat tissue, TNF, leptin, adiponectin, visfatin. resistin..The level of leptin is increased in ESRD and hemodialysis patients. Chronic hemodialysis (HD) frequently encounter carnitin depletion Carnitin has anti-inflammatory and anti-oxidant properties.person who are enrolled must be over 21 years old and they have passed one year of dialysis .50 hemodialysis patients from dialysis centers allocate and divide in to groups.1-intervention group :they receive 1 gram of carnitine daily for 3 month ,2-control group : they do not receive supplement.level of leptin ,adiponectin and TAC are measured at the beginning and the end of study.The aim of study is evaluate the effect of carnitin supplementation on level of leptin and adiponectin and TAC in hemodialysis patients.

Scientific title

The effect of carnitine supplementation on adiponectin and leptin total antioxidant capacity concentrations in hemodialysis patients

Public title

The effect of carnitin supplementation in hemodialysis patients

Purpose

Other

Inclusion/Exclusion criteria

Inclusion criteria: patients on hemodialysis in last year; age older than 21 years old and did not take antibiotics; vitamin C, vitamin E, carnitine during last 8 weeks.

Exclusion criteria: if a patients suffering from an infection disease or fever in last month or is taking antibiotics.

Age
From **20 years** old to **70 years** old

Gender
Both

Phase
N/A

Groups that have been masked
No information

Sample size
Target sample size: **50**

Randomization (investigator's opinion)
Randomized

Randomization description

Blinding (investigator's opinion)
Not blinded

Health conditions studied

1

Description of health condition studied
Hemodilysis

ICD-10 code
Z49

ICD-10 code description
Care involving dialysis

Primary outcomes

1

Description
Leptin

Timepoint
Baseline, end of thirth month

Method of measurement
ELISA

2

Description
Adiponectin

Timepoint
Baseline, end of thirth month

Method of measurement
ELISA

3

Description
Total anti oxidant capicity

Timepoint
Baseline, end of thirth month

Method of measurement
ELISA

Secondary outcomes

empty

Intervention groups

1

Description
Intervention group: take 1 gram L carnitin syroup for 3 months.

Category
Treatment - Drugs

2

Description
Control group: patients do not recieve carnitin supplement or drug.

Category
N/A
