The effect of education on Maternal role Attainment and stress in the postpartum period among primiparous women

Protocol summary

Registration timing: **registered_while_recruiting**

Summary

The purpose of this study is to examine the effect of educational program on maternal role attainment. A total of 100 pregnant women, 18 years of age and older, 36 WK and above, first- time mother with a singleton and uneventful pregnancy, without past psychiatric history are going to participate in this study. At first, all participants in the intervention group(n=50) and the control group (n=50) will be applied to complete questionnaires (Demographic Scale, Stress Scale, Maternal Identity Scale) after their informed consent about the research will be received. The expectant mothers in experimental group will take part in 3 educational sessions (a couple of sessions before and third session between 10 to 15 days after childbirth) and will be given 2 educational booklets and one CD. The education will be about different types of information about baby-care. This research is going to be conducted in two curative and health canthers located in the southern region of Tehran that has similar socioeconomic situation. For prevention of exchanging educational information; the research will be conducted with control group in the curative and health center of Ayet and experimental group in the curative and health center of Aboozar. The participant will be excluded from the study in the case of fetal death or the death of baby and newborn anomalies or be quit of continuing in the study. All participants will complete questionnaires (Maternal Competence Scale, Stress Scale, and Maternal Identity Scale) at 6 and 12 weeks postpartum. The questionnaire of birthing and breastfeeding information will be completed at 12 weeks postpartum by all participants.
