The effect of six weeks balance training program on kinematic of walking in elderly people

Protocol summary

Summary

The aim of this present study was to examine the effect of 6 weeks balance training on some of the kinematic features of walking in elderly woman. For this purpose, 20 elderly woman whose static and dynamic balance was at the standard level according to the results of BBS and TUG tests participated voluntarily in this study. They were randomly divided to control and experiment groups. Criteria to participate in research without affecting diseases such as walk orthopedic problems, cardiovascular, neurological, and visual and performing sports activities are not prohibited by the Physician. Exclusion criteria, subjects not participated in regular exercise, illness and death are considered. Subjects in each group took part in a walking test in a pre-test session followed by a post-test after 6 weeks. During this period, subjects in the experiment group did the balance training systematically for 3 sessions in a week, overall were trained for 18 sessions balance training until engage somatosensory, visual, vestibular systems such as (jumping out of the hole, gait by 8, crossing obstacle, walking with heel) which monitored by the scholar while the control group followed their ordinary lives. Whereas the control group the normal activities of daily follow-up. Research outcomes to improve the length and width of the steps, walking speed and double the time dependence of these factors could predict falls in the elderly says.

Intervention groups

1

Description

Balance training in intervention 1- Puddle jumng 2- walk

up a few stairs or step over a few obstacle 3 – seated arm swings 4- Walking with arms swings 5- Keeping you on your toes 6-walking on your toes 7- Heel – touch and roll –up 8-walking with Country – western heel and toe 9- walking straight and narrow with eyes blocked 10- walking stare to picture 11- reach (reach with knees straight and feet parallel, reach with hip back and feet offset) 12- Rock forward , knee lift 13- walk up a few stairs or step over a few obstacle 14 – walk with pickup line 15- practice sit to stand and stand to sit 16- walk figure- eight obstacle course 17- head turns sitting 18- practice with jimball on wall 19-pull back on jimball 20- stand up and forward with jimball 21- place your best foot on the step Program intervention for six weeks three sessions per week for an hour(static exercise for 10 seconds or tens repetition and exercise dynamic walking 12 times in the six yards four times by looking at the sight, and 4 times with dual task (counting numbers) and 4 times with eyes closed)
