Comparison of collaborative learning and context based learning (CBL) on learning, attitude and behavior of nursing students

Protocol summary

Summary

The purpose of this study was to compare the collaborative learning and context based learning (CBL) on learning, attitude and behavior of nursing students. This was a quasi-experimental study with randomized allocation that performed in two groups with 20 students. Inclusion criteria were senior nursing student and desire to participate in the study and exclusion criteria was non-cooperation. Demographic characteristics, standard questionnaires for attitude, learning and behavior evaluation of students were completed at the beginning and the end of the study in two study groups. In CBL group, clinical education of students was done according to four steps: test context, self- direction, integration of new information, and deep thought (feedback). In collaborative learning group, determining of educational needs, decision making and implementation were given to students.
