Comparison of intra-articular injection of Hyaluronic acid with Corticosteroids in reducing pain in patients with knee osteoarthritis

Protocol summary

Summary

The purpose of the present study is comparison of intra-articular injection of hyaluronic acid with corticosteroids in reducing pain in patients with knee osteoarthritis . This study is a randomized clinical trial study . Inclusion criteria :1)Patients with moderate to severe osteoarthritis of the knee 2)The patient agreed to participate in the study ,Exclusion criteria :1)Unstable joint 2)Necrosis 3)Bleeding disorders 4)Joint fracture 5)Injection site infection 6)Joint prosthesis 7)Previous history of tuberculosis 8)Surgery in the past 12 months and inability of follow up patients because of migration or death .In this study ,50 patients who fulfilled inclusion criteria for the study were selected .Demographic information such as age , sex , weight , duration of illness and ... ask them and recorded in a special form. At baseline , patients taught about the purpose of the plan and that their treatment is a research work and intra-articular injection of hyaluronic acid and corticosteroids maybe have relative efficacy of the treatment .Also the possibility of cross effects were noted and written consent shall be taken from them . Patients randomly divided into two groups of 25 . In first group ,40 milligram methylprednisolone and in second one 20 milligram hyaluronic acid is injected into the knee joint . VAS (Visual Analogue Scale) used to determine the severity of pain .Before injection the severity of pain with the criteria will be determined , and patients one month and three months after the injection will be followed up and severity of pain , their satisfaction and improvement will be evaluated .

Health conditions studied

1

Description of health condition studied

Knee osteoarthritis

ICD-10 code

M17.0

ICD-10 code description

Primary gonarthrosis , bilateral

Primary outcomes

1

Description

Severity of pain

Timepoint

Before the intervention,one month and three months after intervention

Method of measurement

Visual Analogue Scale (VAS)

Secondary outcomes

1

Description

Satisfaction of treatment

Timepoint

Before the intervention ,one month and three months after intervention

Method of measurement

Standard questionnaire

Intervention groups

1

Description

Amp Hyaluronic acid 20mg ,IA,one dose per week for three consecutive weeks

Category

Treatment - Drugs

2

Description

Amp Methylprednisolone 40mg ,IA, an injection in the baseline and patients may receive another injection during the study period

Category

Treatment - Drugs
