The effect of Religious education Religious knowledge and belief on Indicators of infant growth 0 to 3 months in the primipara women in Prenatal in clinics in selected hospitals of Tehran University of Medical Sciences (2013)

Protocol summary

Summary

This randomized clinical trial study is on 90 primi-parous women referring to selected medical-educational centers (Arash & Baharloo hospitals) in Tehtan University of Medical Sciences ,about The effect of Religious education on Religious knowledge and belief and Postpartum blues of the primipara women in Prenatal clinics in selected hospitals of Tehran University of Medical Sciences. This is a randomized clinical trial which was conducted on 220 pregnant women in the selected centers of Tehran university of medical science (Arash and Baharlo hospitals), for the purpose of investigating the effect of Religious education on the religion awareness and Postpartum. After obtaining of the patients' Consent, they were randomly divided into 2 groups of intervention and control. First religious attitudes and awareness and anxiety of the pregnant women were investigated and those who had high levels of religious attitudes were put aside; they only were investigated 7 to 10 days after Childbirth. Remaining people, who had average and low religious attitude were divided into 2 groups of intervention and control. In the intervention group they were under religious education and examined again, while in control group they just received normal care. Finally, the Postpartum were investigated and analyzed in 2 groups,0 and 1 and 3 months after the child birth for development.

Intervention groups

1

Description

People in the intervention and control groups have average or low religious attitudes. Pregnant women were under religious education for 20 to 30 weeks, and after 6 sessions of education in each week(Deism Education), they again filled up the questionnaires on religious attitudes and awareness and anxiety, in this way it can be seen that the participation in these educational classes how much affected the religious attitudes and awareness and anxiety. 2 months after the education, 3 questionnaires would be again filled up in order to determine the stability of the education
