Comparing effectiveness of Damask rose and lavender scent on severity of pain and anxiety after Cesarean section, through women.

Protocol summary

Summary

Purpose of the study is to discuss the effect of aromatherapy on severity of pain and anxiety after cesarean section. This measurement would be done last to 48 hours after surgery by Spielberg-er standard questionnaire and visual analogue scale. Scent consumed in intervention group was Damask rose and Lavender aroma. Studied population are all women who referred to Motaharie hospital in Jahrom, being operated by cesarean method that achieve participation minimal. Sample size estimation is 90 person. Before surgery, patients divided into three groups by simple random allocation: 1) Instance 2) Intervention(with Lavender) 3) Intervention(with Damask rose) At first group, after admitting patient into maternity ward, anxiety and pain level will be recorded without any further proceedings. At second group, after admission, researcher would dipped cotton with lavender aroma and attach it to patient clothing. At third group, researcher would dipped cotton with damask rose aroma and attach it to patient clothing as well. Then their level of anxiety and pain will be recorded. After surgery and further entry to the ward, necessary interventions would be done beside pain and anxiety measurements every 30 minutes for duration of six hours. Patients suffering from chronic and cancer pains, psycho-social problems and those who are allergic to mentioned flavors will be excluded. All patients should be consciously involved in the study. It is expected that interventions cause anxiety and pain relief, beside satisfaction increase, from this non-pharmacological pain control method.

Scientific title

Comparing effectiveness of Damask rose and lavender scent on severity of pain and anxiety after Cesarean section, through women.

Public title

Post-surgery effect of aromatherapy on pain and anxiety

Purpose

Supportive

Inclusion/Exclusion criteria

Inclusion Criteria: All patients who are about to undergo crusher surgery through the skin in Motahari Hospital affiliated with Jahrom University of Medical Sciences and spinal anesthesia can be done for them. Informed consent to participate in this study is among the main inclusion criteria. Exclusion criteria: Sensitivity to roses and Lavender; education lower that primary; developing chronic and cancerous pain; hearing or speech loss; lack of mental health; chronic use of drugs and sedatives; Unstable hemodynamic status; expressed dissatisfaction to continue research.
