The effectiveness of healthy lifestyle promotion intervention via cognitive-behavioral procedure on self-management and quality of life in patient with congestive heart failure

Protocol summary

Summary

The purpose of this study was to investigate the effectiveness of healthy lifestyle promotion intervention via cognitive-behavioral procedure on self-management and quality of life in patients with congestive heart failure. In a quasi-experimental design, a randomized controlled trial with pre test, post test, and follow-up assessments along with control group was conducted. In this clinical trial, 30 patients with congestive heart failure selected by convenience sampling among patients who attended to shahid rajaee hospital in Tehran. Then, they randomly assigned to control and experimental groups. The participants were completed the instruments of Quality of Life in Patients With Heart Failure(IHF-QoL), European Heart Failure Self-care Behaviour Scale(EHFScBS) and Depression – Anxiety & Stress Scale(DASS) in pre-test, post-test and follow-up phase.

ICD-10 code description

Heart failure

Primary outcomes

1

Description

Quality of life

Timepoint

Pre-test, post-test , follow-up.

Method of measurement

Quality of Life Questionnaire in Heart Failure(IHF-QOL) and Depression-Anxiety and Stress Scale(DASS).

2

Description

Self-management

Timepoint

Pre-test, post-test , follow-up.

Method of measurement

European Heart Failure Self-care Behaviour Scale(EHFScBS).

Secondary outcomes

empty

Intervention groups

1

Description

In this study the effectiveness of healthy lifestyle promotion intervention via cognitive-behavioral procedure in eight session 1.30 hr for experimental group in the shahid rajaee hospital in Tehran, was conducted.

Category

Lifestyle

2

Description

In the control group take place routine care and also are seen at start, after 2 months and at the end of the followup.
