Effectiveness and non-effectiveness of group discussion on self-care ability and self-esteem in patients with heart failure admitted to Imam Alihospital of Kermanshah

Protocol summary

Summary

This study will be done with aim to investigate the effect of group discussion on self-care ability and self-esteem in patients with heart failure admitted to Imam Ali hospital of Kermanshah. This is a non-blinded clinical trial. The study population will include all patients with heart failure that will be referred to Imam Ali Hospital in Kermanshah. A total of 80 individuals will be selected in available method and on the basis of random tables will be assigned in and control groups. At baseline Rosenberg Self-Esteem questionnaire and European scale of self-care behavior will be provided for both experimental and control groups. The intervention group will be divided into three classes 10 to 15 person. The experimental group will receive 8 sessions of group discussion (every week one session). The control group will receive only routine interventions of hospital. After a month Rosenberg Self-Esteem questionnaire and European scale of self-care behavior will be provided for both groups and self-care ability and self-esteem in both groups will be compared. Inclusion criteria: Having functional class III and IV New York Heart Association; Diagnosis of heart failure at least six months ago, Minimum age 18 years and maximum 65 years; Can read and write; Lack of private nurse, Lack of work experience in hospitals; Lack of hearing and vision disorders. Exclusion criteria: Absence in the more than 25% of classes. The effect of group discussion on the clients' self-esteem and self-care ability with heart failure disease referred to Imam Ali hospital in Kermanshah
