The effect of body image concern educational intervention on girl student's self-esteem in governmental high school of shiraz city : the application of theory of self-efficacy

Protocol summary

Summary

Aim of This study is to investigate the effect of an educational program regarding body image concern on self-esteem of female students using self-efficacy theory and the 8-step Cash's model. The participants will select using multi-step random cluster sampling. In the first step, the 4 educational districts of Shiraz were allocated to 2 clusters because of socioeconomic similarity. Then, one district from each cluster was randomly selected. In the next step, two high schools will randomly select from each selected district. The selected high schools in district will randomly assign to an intervention and a control group. Eventually 80 student for control group and 80 students for intervention group enter to study. Interventional program conduct in 6 session for intervention group. and each session takes 45 minutes. For evaluation of effect of educational intervention we use Littleton Body Image Concern Inventory questionnaire, Rosenberg's Self-Esteem Scale at the three different period time, before intervention, 1 week after intervention and 6 week after intervention.
