The effect of sensory stimulation on physiologic parameters of selected hospitals of Isfahan University of Medical Sciences' critical care patients

Protocol summary

Summary

This study was conducted to determine The effect of sensory stimulation on physiologic parameters of critical care patients. The inclusion criteria were Eighteen to sixty years of age , $12 \leq \text{GCS} \leq 9$, Having hemodynamic stability and Exclusion criteria were Presence of hearing impairment, skin disorders, psychiatric disorder ,life-threatening disease as advanced cancer and renal failer, Create the conditions that needs to emergency Medical or Nursing intervention. Participants were 64 patient hospitalized in intensive care unit that selected using convenience sampling and divided in 2 groups control and intervention. patient's physiologic parameters(systolic blood pressure, diastolic blood pressure, pulse rate and arterial blood oxygen saturation)were measured 10 minutes before intervention and recorded as before intervention physiologic parameters then patient family in intervention group after wearing gown and Slippers and washing hands and rubbing them with antibacterial jel and training about the correct procedure entered to ward and 15 minute Under the supervision of Researcher touched patient and talked with he/her and after 15 minute left the ward. Physiologic parameters were recorded immediately, 10 minutes and 30 minutes after intervention. In control s group Simultaneously without any intervention physiologic parameters were recorded in 0, 27,37 and 57 minute. Intervention was performed twice on day in the morning and afternoon.

Scientific title

The effect of sensory stimulation on physiologic parameters of selected hospitals of Isfahan University of Medical Sciences' critical care patients

Public title

The effect of family communication and touch on unconscious patient

Purpose

Supportive

Inclusion/Exclusion criteria
 Inclusion criteria : Eighteen to sixty years of age in patients ; admitted to ICU >24 h ; 12≥GCS≥9 ; Presence of hemodynamic stability: HR = 60-100 , MBP>65mmHg, o2 sat >90%; Being available patient family! Pass at least 6 hours from the time of opioid or sedative drugs injection; The patient might be intubated or not.
 Exclusion criteria: Addiction with cigarette, opioide or alchol; Presence of hearing impairment ; Presence of skin disorders; Presence of psychiatric disorder; Presence of life-threatening disease as advanced cancer and renal failer; Dopamin, TNG or Dobutamin infusion during intervention; Create the conditions that needs to emergency Medical or Nursing intervention.

Health conditions studied

1

Description of health condition studied
 decreased level of consciousness

ICD-10 code
 R40.2

ICD-10 code description
 Coma, unspecified

Primary outcomes

1

Description
 Systolic blood pressure

Timepoint
 10 minute before intervention, immediately after intervention, 10 minute after intervention, 30 minute after intervention

Method of measurement
 Connected to patient hemodynamic monitoring

2

Description
 Diastilic blood pressure

Timepoint
 10 minute before intervention, immediately after intervention, 10 minute after intervention, 30 minute after intervention

Method of measurement
 Connected to patient hemodynamic monitoring

3

Description
 Pulse

Timepoint
 10 minute before intervention, immediately after intervention, 10 minute after intervention, 30 minute after intervention

Method of measurement
 Connected to patient hemodynamic monitoring

4

Description
 Oxygen sauration

Timepoint
 10 minute before intervention, immediately after intervention, 10 minute after intervention, 30 minute after intervention

Method of measurement
 Connected to patient hemodynamic monitoring

Secondary outcomes

1

Description
 Family anxiety

Timepoint
 Before and after intervention

Method of measurement

Spielberger State-Trait Anxiety Inventory

2**Description**

Patient anxiety

Timepoint

Before and after intervention

Method of measurement

Fase anxiety scale

Intervention groups**1****Description**

This intervention is performed in three 5 minute section with two 1 minute intervals and is performed twice on day between 10-12 hours in the morning and between 3-5 hours in the afternoon. The families in the intervention group after wearing gown and Slippers and washing hands and rubbing them with antibacterial jel enter the ward and sit on the chair near the bed, call the patient by one's normal intonation, introduce oneself, hold the patient's hands, touch the patient gently, talk to the patient about all the measures that had been done for the patient's improvement, and wait for 1 min. Then, in the second 5 min of the visit, the visitor again should touch the patient's hands and face, make the patient familiar with the time and place, and wait again for 1 min. In the third set of 5 min, the visitor should touch the patient again, say goodbye, and finally state the time of the next visit.
