The effect of trigger point release of patients with tension type headache on reduction of pain and grip force and grip endurance

Protocol summary

Summary

Objective: the effect of trigger point release of patients with tension type headache on reduction of pain and grip force and grip endurance. Inclusion criteria: trigger points, nausea, vomiting and photophobia during attacks. Exclusion criteria: anti-anxiety and anti-depression drugs, upper extremity and spinal injuries during the past year, paresthesia and neurological symptoms. population and sample size: 28 patients with tension type headache (men and women). Interventions: Treatment phase starts in 6 sessions in 2 weeks. In each session one hot pack used for neck muscles for 10 min afterwards, post isometric relaxation technique used for muscles with trigger points. this technique is associated with eye movements and breathing pattern. During contraction, breathe out and look for the contraction and at rest, exhale done and look for opposite side. Contraction repeat 5-3 for each session 10 seconds. Measurement: measured grip strength and endurance before and after interventions using dynamometer. measured pain before and after interventions using Visual Analog Scale

Health conditions studied**1****Description of health condition studied**

Tension type headache

ICD-10 code

G44.2

ICD-10 code description

Tension-type headache

Primary outcomes**1****Description**

grip strength

Timepoint

before intervention, after intervention

Method of measurement

using dynamometer

2**Description**

grip endurance

Timepoint

before intervention, after intervention

Method of measurement

using dynamometer

3**Description**

pain

Timepoint

before intervention, after intervention

Method of measurement

using Visual Analog Scale(VAS)

Secondary outcomes

empty

Intervention groups**1****Description**

Using a hot pack for 10 min

Category

Treatment - Other

2**Description**

Post isometric relaxation technique used for muscles with trigger points. this technique is associated with eye movements and breathing pattern. During contraction, breathe out and look for the contraction and at rest, exhale done and look for opposite side. afterwards, examiner Put muscle in an elongated
