Effects of Zinc sulfate and Folic acid administration on semen quality and some sex hormones in varicocelectomized men

Protocol summary

Summary

Varicocele is a common disease of male genital organ that may cause subfertility or infertility. Folic acid and zinc sulfate have been introduced as treatments in the case of subfertility in infertility causative factors other than varicocele. Our aim of this study is to investigate the probable effects of folic acid and zinc sulfate on semen quality and fertility status of male subjects undergoing varicocelectomy. One hundred Patients suffering from varicocele will be randomly divided to four groups of 25 patients each. Patients will receive appropriate surgery to correct the varicocele. Following varicocelectomy, Patients will receive zinc sulfate, folic acid, zinc sulfate and folic acid, or placebo respectively. Patients with a history of Diabetes, high blood pressure and cancer of testis will be excluded. Hormonal status (Tetosterone, FSH and Inhibin), semen and sperm parameters, and the level of NO and SOD will be evaluated before the intervention, three and six months later.

Scientific title

Effects of Zinc sulfate and Folic acid administration on semen quality and some sex hormones in varicocelectomized men

Public title

Effect of zinc and folic acid on male reproduction

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria: Men with a history of varicocele.

Exclusion criteria: Men with a history of cancer of testis, high blood pressure (systolic blood pressure >140 mmHg), or diabetes.

Age

No age limit

Gender

Male

Phase

N/A

Groups that have been masked

No information

Sample size

Target sample size: 100

Randomization (investigator's opinion)

Primary outcomes

1

Description

Change in sex hormone

Timepoint

Before intervention, 3 mo, and 6 mo after intervention

Method of measurement

Evaluation of hormones by ELIZA

2

Description

Quality of semen

Timepoint

Before intervention, 3 mo, and 6 mo after intervention

Method of measurement

sperm analysis

Secondary outcomes

1

Description

Change in fertility status

Timepoint

1 y

Method of measurement

Rise in hCG/ sonographic evaluation

Intervention groups

1

Description

Folic acid Capsules 5 mg/day, orally plus Zinc sulfate 50 mg/day orally for six months

Category

Treatment - Drugs

2

Description

Zinc sulfate Capsules 50 mg/day, orally plus placebo capsules with the same dose and shape as Folic acid capsules for 6 months

Category

Treatment - Drugs

3

Description

Folic acid Capsules 5 mg/day, orally plus placebo capsules with the same dose and shape as Zinc sulfate capsules for 6 months

Category

Treatment - Drugs

4

Description

Placebo capsules filled with starch with the same dose and shape as active drugs (Folic acid and Zinc sulfate capsules) for 6 months

Category

Placebo
