Comparing post-operative complication of Ligasure Small Jaw Instrument with clamp and tie method in thyroidectomy patients : A Clinical Trial

Protocol summary

Summary

In current study, we aim to discuss effect of Ligasure Small Jaw Instrument on hypocalcemia prevalence decrease in thyroidectomy patients. One hundred and fifty patients with thyroidectomy indication, who will be admitted in surgery wards of Tabriz Taleghani and Emam Reza hospitals from March 2014 till March 2015, enroll our study. All patients take part in case or control group by their own willing, as they choose surgery method on their own, and some will receive Ligasure Small Jaw and others Clamp and tie method.(P less than 0.05 is statistically significant) Sampling is non-randomized and census and patients candidate for thyroidectomy such as thyroidectomy cancers will enroll our study. All patients will be visited one day, one week and 6 week after operation, in order to evaluating their complications after surgery such as: vocal cord paresis, hematoma, hemorrhage, wound infection, and chronic pain. This examinations will be done by a surgeon, and data will be recorded carefully.

Scientific title

Comparing post-operative complication of Ligasure Small Jaw Instrument with clamp and tie method in thyroidectomy patients : A Clinical Trial

Public title

Ligasure Small Jaw Instrument effect on decreasing post-operative complications in thyroidectomy patients in comparison to Clamp and Tie method

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria: Multinodular Goiter; Thyroid cancers;

Retrosternal Goiter Exclusion criteria: Vocal cord

paralysis; Secondary thyroid surgery; History of head and

neck surgeries; Concurrent parathyroid diseases

Age

No age limit

Gender
Both

Phase
N/A

Groups that have been masked
No information

Sample size
Target sample size: **200**

Randomization (investigator's opinion)
Not randomized

Randomization description

Blinding (investigator's opinion)
Not blinded

Blinding description

Placebo
Not used

Assignment
Parallel

Other design features
Because, patients choose their surgery method by their own willing and due to their financial statement, so the study is non-randomized and non-blinded.

Health conditions studied

1

Description of health condition studied

Thyroid diseases

ICD-10 code

E07

ICD-10 code description

Other disorders of thyroid

Primary outcomes

1

Description

Investigating recurrent laryngeal nerve paralysis
incidence in patients undergo surgery with 2 methods

Timepoint

Before Surgery- During post-operative extubation- 1 day
after surgery- 6 week after surgery

Method of measurement

Checking vocal cords, Patient voice tone

Secondary outcomes

1

Description

Evaluating neck hematoma prevalence in patients
undergo surgery by both surgery methods

Timepoint

1 days after surgery- 1 week after surgery- 6 week after
surgery

Method of measurement

Surgery area examination, Conterol neck CT scan

Intervention groups

1

Description

Thyroidectomy by Ligasure small jaw instrument:
Ligasure Small Jaw Instrument helps to coagulate and cut
the thyroid nutrient vessels without any knot and suture,
and facilitates thyroid resection procedure.

Category

Treatment - Surgery

2

Description

Thyroidectomy by Clamp and Tie method: This method is
also known as Conventional thyroidectomy, which
perform by several knots on nutrient vessels of thyroid,
for completing thyroid resection.

Category

Treatment - Surgery
