The effect of an anise-based product in Iranian traditional medicine, on the Treatment of patients with chronic rhinosinusitis (CRSsNP) , in comparison to fluticasone nasal spray

Protocol summary

Summary

This Clinical Trial will evaluate the Effects of a herbal product based on Anise (Nasal Drop) on treatment of chronic Rhinosinusitis without polyps. 74 patients between 18 to 75 years old with chronic nasal complaints (over 12 weeks) referred to the ENT clinics after examination, diagnostic endoscopy and CT scan will diagnose as CRS and can enter to study. Patients eligible for inclusion in the study will divided by Block Randomization method into two groups. Treatment duration is one month in both groups. Patients in both groups evaluate by major and minor symptoms and signs of Rhinosinusitis and SNOT-22 questionnaire before and after intervention (day 0 and day 28). Intervention Group will receive herbal nasal drop two times daily 3 drop in each nostril plus nasal irrigation for one month. Control group will receive Fluticasone spray two puff in each nostril Two times daily plus nasal irrigation for one month.
