Intervention groups**1****Description**

This research is experimental with control and intervention groups. The researcher with a referral from Urmia University of Medical Sciences refer to Pishgaman Omid center in 2017 . If the mothers are willing and willing to participate in the study, they will be provided with a list of them and will be selected as simple random sampling and according to the sample size formula. At first, a demographic questionnaire and a personalized consent form will be provided to both groups. Data will be collected by three stressful questionnaires, mother and child relationship assessment, and the meaning of life. In addition to current programs, Logotherapy meetings will be held for the intervention group during 10 sessions (two sessions a week), but the group Control Received the current programs. After the completion of intervention and follow up, Logotherapy training will be provided to the control group in 5 (one-hour) meetings. The members of the intervention group (two groups of 10 person) will be present at the meetings. After three months, questionnaires will be completed .The Logotherapy will be performed for groups (2 groups and in each group is of 10 person) for 10 sessions and each session lasts for 90 minutes.
