The effect of Theory-Based educational intervention on osteoporosis preventive behaviors in women 2013

Protocol summary

Summary

Osteoporosis is a health priority in Iran and the world. Recently, the prevention of osteoporosis, has been the target of many health professionals. Behavior change is one of the powerful strategies for the prevention of osteoporosis. This study aimed to determine the effect of the trans-theoretical model in the prevention of osteoporosis in women 30-50 years of Khorramabad behaviors has been designed. A clinical trial on 136 eligible women in the intervention and control groups, using multistage cluster sampling will be conducted. Both groups valid and reliable questionnaires of stage of change, self-efficacy and decision balance of trans theoretical model on calcium intake and physical activity are examined. Then training program will be held for calcium intake and physical activity intervention group. Learning to control group action dose not take place. Both groups of three stages: before, after and three months after intervention again the questionnaire evaluated.
