A comparison between the effects of Task-Oriented Training combined with Bobath programme and Task-Oriented Training alone on the function of upper extremity in post-stroke hemiparesis patients

Protocol summary

Summary

Stroke is the third cause of death worldwide. Upper extremity function is one of the important factors that are affected by stroke and it can cause disability. Some rehabilitation approaches specifically developed for hemiparesis after stroke is Task Oriented Training and Bobath program. Researchers have shown the best approach to improve upper limb function is still not evident and there is no article showing that one of the approaches gives better outcomes than the others. Methods: Sixteen patients with hemiparesis due to stroke were allocated randomly to either an intervention or control group. The intervention group will receive a combination of Task-Oriented Training with Bobath program for 60 minutes 3 days in a week for 6 weeks, and the control group will receive a Task-Oriented Training alone for 60 minutes. Fugl Meyer Test, Wolf Motor Function Test, Barthel ADL Index, Hand Strength Test, Modified Functional Reach Test, and the Modified Ashworth Scale will be done before treatment, in the 6th session, and after treatment.

Scientific title

A comparison between the effects of Task-Oriented Training combined with Bobath programme and Task-Oriented Training alone on the function of upper extremity in post-stroke hemiparesis patients

Public title

A comparison between the effects of Task-Oriented Training combined with Bobath programme and Task-Oriented Training alone on the function of upper extremity in post-stroke hemiparesis patients

Purpose

Treatment

Inclusion/Exclusion criteria

Inclusion criteria: first unilateral hemiparesis following stroke ranging between 2-12 months (sub-acute and chronic stage); MMSE more than 20; Motor recovery of hand Brunnstrom stages ≥ 3 ; score of spasticity of the elbow flexors ≤ 3 based on the Modified Ashworth Scale (MAS); they must have 45-70 years of age; score of Depression based on the Geriatric Depression Scale (GDS) ≤ 8 ; and they do not receive any upper-limb rehabilitation programs during the participation in this study. Exclusion criteria: they have previous injury, disease, or contracture of the upper extremity; no sitting balance; any co-morbid neurological disease or condition such as multiple sclerosis, Parkinson disease, spinal cord injury, traumatic brain lesions, brain tumor, epilepsy, or dementia; and they have Hemineglect phenomena.

Age

From **45 years** old to **70 years** old

Health conditions studied

1

Description of health condition studied

Stroke

ICD-10 code

G81.1

ICD-10 code description

Cerebral palsy and other paralytic syndromes

Primary outcomes

1

Description

Upper limb function

Timepoint

Exactly before the treatment, in the six treatment session, and exactly after the treatment

Method of measurement

By Wolf Motor Function Test

2

Description

Strength of the hand

Timepoint

Exactly before the treatment, in the six treatment session, and exactly after the treatment

Method of measurement

by using Hand Strength Test

3

Description

Motor function of upper extremity

Timepoint

Exactly before the treatment, in the six treatment session, and exactly after the treatment

Method of measurement

By using Fugl Meyer Test

4

Description

Sitting balance

Timepoint

Exactly before the treatment, in the six treatment session, and exactly after the treatment

Method of measurement

By using Modified Functional Reach Test

Secondary outcomes

1

Description

Activities of Daily Living

Timepoint

Exactly before the treatment, in the sixth treatment session, and exactly after the treatment

Method of measurement
By using Barthel ADL Index

2

Description
Muscle tone

Timepoint
Exactly before the treatment, in the sixth treatment session, and exactly after the treatment

Method of measurement
By using Modified Ashworth Scale

Intervention groups

1

Description
The control group will receive Task-Oriented Training program alone for 60 min.

Category
Rehabilitation

2

Description
The intervention group will receive combination of Task-Oriented Training with Bobath program for 60 min: 30 min Bobath programme and 30 min Task-Oriented Training.

Category
Rehabilitation
